Introduction to Digital Marketing

What is Digital Marketing?

- Digital marketing means promoting a product, service, or business using the internet and digital platforms.
- Examples:
 - Advertising on Facebook and Instagram
 - Google Search Ads
 - YouTube Ads
 - Email Marketing
 - WhatsApp Marketing
 - SEO (Search Engine Optimization)
- Instead of using newspapers or TV, digital marketing helps you reach people through their phones, computers, and tablets.

Why is Digital Marketing Important?

- Imagine you own a clothing shop.
- Without digital marketing:
 - Only people near your shop know about it.
- With digital marketing:
 - Thousands of people across your city—or even the whole country—can see your products.
- Benefits:
 - Reach more customers
 - Lower advertising costs
 - Measure results
 - Target the right audience
 - Increase sales and leads

Types of Digital Marketing

1. Social Media Marketing (SMM)

- Promoting products or services on social platforms such as:
 - Facebook
 - Instagram

- LinkedIn
- X
- Pinterest
- Example: A clothing brand runs Instagram ads for a new collection.

2. Search Engine Optimization (SEO)

- SEO helps your website appear higher in Google search results without paying for ads.
- Example: Someone searches:
- "Best digital marketing course in Kanpur"
- If your website appears on the first page, you can get free visitors.

3. Search Engine Marketing (SEM)

- Paid advertising on search engines.
- Example: Google Search Ads.
- You pay when someone clicks your ad (Pay-Per-Click).

4. Content Marketing

- Creating valuable content to attract customers.
- Examples:
- Blog posts
- Videos
- Reels
- Infographics
- PDFs

5. Email Marketing

- Sending emails to customers to:
- Promote offers
- Share updates
- Build relationships

6. Affiliate Marketing

- You earn a commission by promoting someone else's products.
- Example: Share a product link. If someone buys through your link, you earn money.

7. Influencer Marketing

- Brands collaborate with creators who have an audience.
- Example: A beauty influencer promotes a skincare product.

Organic Marketing vs Paid Marketing

- Organic Marketing
 - Paid Marketing
- Free
 - Paid
- Takes time
 - Fast results
- SEO
 - Meta Ads
- Instagram posts
 - Facebook Ads
- YouTube videos
 - Google Ads

What is Meta?

- Meta is the company that owns:
- Facebook
- Instagram
- Messenger
- Threads
- When you create ads on Meta, you can choose where they appear across these platforms.

What is Meta Ads?

- Meta Ads is the advertising platform used to create and manage ads on Meta's apps.
- You can promote:
- Products
- Services
- Courses
- Websites
- Apps
- Events
- Local businesses

Real Example

- Suppose you have a Meta Ads Course priced at ₹999.

- You create a Meta ad with:
- An attractive image or video
- A compelling headline
- A clear call to action like "Enroll Now"
- People interested in learning Meta Ads see your ad, click it, and fill out a form or send a WhatsApp message. Those become your leads, and some of them purchase your course.
- This is how Meta Ads helps generate business

Important Terms

- Campaign: Your advertising goal (e.g., generate leads).
- Ad Set: Audience, budget, schedule, and placements.
- Ad: The creative people actually see (image/video + text).
- We'll learn these in detail later.

HOMEWORK

- What is digital marketing?
- Name any five types of digital marketing.
- What is the difference between organic and paid marketing?
- What is Meta Ads?
- Give one example of how a local business could use Meta Ads.

2

Marketing Funnel & Customer Journey

- Before you run any Meta ad, you need to understand how people become customers. Most people do not buy the first time they see an ad. They move through stages, which is called the marketing funnel.

What is a Marketing Funnel?

- A marketing funnel is the journey a person takes from not knowing your business to becoming a customer.
- Think of it like this:
 - Awareness
 - ↓
 - Interest
 - ↓
 - Consideration
 - ↓
 - Purchase
 - ↓
 - Loyal Customer
- At the top of the funnel, many people see your ad. As they move down, fewer people remain, but they are more interested and more likely to buy.

3

How to Create a Facebook Business Page

- A Facebook Page is the identity of your business on Facebook. You need a Page to run Meta ads.

Step 1: Log in to Facebook

- Sign in to your personal Facebook account.
- Note: Your personal profile is different from your business page. Customers will interact with your Page, not your personal profile.

Step 2: Go to the Page Creation Screen

- On Facebook:
- Click Menu () or Pages.
- Click Create New Page.

Step 3: Enter Your Page Information

Page Name

- Use your business or brand name.
- Examples:
- Shubh Marketing
- Shubh Digital Academy
- Jan Connect PR
- Choose a name that is easy to remember and matches your brand.

Category

- Select the category that best describes your business.
- Examples:
- Education
- Digital Creator
- Marketing Agency
- Advertising Agency
- Education Website
- Business Consultant

- You can add multiple relevant categories if available.

Bio

- Write a short description (up to 255 characters).
- Example:
- Learn Facebook & Instagram Ads with practical live classes. Grow your business with digital marketing. Contact us today!

Step 4: Add Your Branding

- Upload:
- Profile Picture: Usually your business logo.
- Cover Photo: A banner that shows your services or a promotional message.
- Recommended sizes:
- Profile Picture: 1080 × 1080 px
- Cover Photo: 1640 × 624 px (or higher resolution with the same aspect ratio)

Step 5: Complete Your Business Information

- Fill in:
- Website (if you have one)
- WhatsApp number
- Phone number
- Email address
- Business address (if applicable)
- Business hours
- The more complete your page is, the more trustworthy it appears.

Step 6: Create a Username

- Example:
- facebook.com/ShubhMarketing
- Tips:
- Keep it short.
- Make it match your business name.
- Avoid unnecessary numbers or symbols.

Step 7: Add a Call-to-Action (CTA) Button

- Choose the button that matches your goal:
- Contact Us
- Send WhatsApp Message
- Call Now
- Learn More
- Sign Up
- Book Now
- For lead generation, Send WhatsApp Message or Contact Us are popular choices.

Step 8: Publish Your Page

- Once everything is filled in:
- Review your details.
- Click Create Page or Publish.
- Your business page is now ready.

Best Practices Before Running Ads

- Upload a professional logo.
- Add a high-quality cover image.
- Complete the About section.
- Post at least 5–10 quality posts before launching ads.
- Add your contact details and CTA button.
- A page with no content can reduce trust and may affect how people respond to your ads.

Common Mistakes to Avoid

- ✗ Using a personal profile instead of a business page.
- ✗ Leaving the profile picture or cover photo blank.
- ✗ Not adding contact information.
- ✗ Running ads from a brand-new page with no posts.

HOMEWORK

- Create your Facebook Business Page and make sure it includes:
 - ✓ Business name
 - ✓ Profile picture

- ✓ Cover photo
- ✓ Bio
- ✓ CTA button
- ✓ At least 5 posts

4

Meta Business Manager (Business Portfolio)

- Goal: By the end of this lesson, you'll know what Meta Business Manager is, why it's needed, and how to create one.

What is Meta Business Manager?

- Meta Business Manager (now often called Business Portfolio) is a free tool from Meta that lets you manage:
- Facebook Pages
- Instagram Accounts
- Ad Accounts
- Meta Pixel
- Team Members
- Business Assets
- Billing & Payments
- Think of it as the control center for your business.

Why Should You Use Business Manager?

- Imagine you have:
- 3 Facebook Pages
- 2 Instagram Accounts
- 5 Clients
- 4 Team Members
- Managing everything from a personal Facebook account would become difficult.
- Business Manager keeps everything organized and secure.

What Can You Manage?

- Inside Business Manager, you can manage:

1. Facebook Pages

- Example:
- Shubh Marketing
- Jan Connect PR

2. Instagram Accounts

- Connect your Instagram Business Account to manage ads and messages.

3. Ad Accounts

- You can create and manage multiple ad accounts for different businesses or clients.
- Example:
 - Shubh Marketing Ads
 - Client A Ads
 - Client B Ads

4. Meta Pixel

- Track actions on your website, such as:
 - Page View
 - Add to Cart
 - Purchase
 - Lead
 - Contact Form Submission
- This helps optimize your campaigns.

5. Team Members

- You can give different levels of access.
- Example:
 - Role
 - Access
 - Owner
 - Full control
 - Employee
 - Limited permissions
 - Advertiser
 - Can create and manage ads
 - Analyst
 - Can only view reports
- This way, you don't need to share your personal Facebook password.

Business Manager Structure

- Business Portfolio
- |
- |— Facebook Page

- |— Instagram Account
- |— Ad Account
- |— Meta Pixel
- |— Payment Method
- |— Team Members
- |— Domain

How to Create a Business Manager

Step 1

- Go to:
- <https://business.facebook.com/>

Step 2

- Click Create an Account.

Step 3

- Enter:
- Business Name
- Your Name
- Business Email
- Click Submit.

Step 4

- Verify your email address by clicking the confirmation link Meta sends.

Step 5

- Complete your business details:
- Business Address
- Phone Number
- Website (optional)
- Business Type

Add Your Facebook Page

- Open Business Settings.
- Go to Accounts → Pages.
- Click Add.

- Choose one of these options: ◦ Add an existing Page you own. ◦ Request access to someone else's Page. ◦ Create a new Page.

Connect Instagram

- Go to Accounts → Instagram Accounts.
- Click Add.
- Log in with your Instagram Business account.
- Now you can use Instagram in your campaigns.

Create an Ad Account

- Go to Accounts → Ad Accounts.
- Click Add.
- Select Create a New Ad Account.
- Choose: ◦ Time Zone ◦ Currency ◦ Business Purpose
- Assign yourself full access.

Add a Payment Method

- Go to:
- Billing & Payments → Payment Settings
- You can add:
- Debit Card
- Credit Card
- UPI (where available)
- Net Banking (depending on Meta's supported options)

Best Practices

- Use your real business information.
- Enable two-factor authentication (2FA) on your Facebook account.
- Never share your Facebook password with team members—invite them through Business Manager instead.
- Keep one Business Manager for your business and separate ad accounts for different brands or clients when appropriate.

Common Mistakes

- ✗ Creating multiple unnecessary Business Managers.
- ✗ Using fake business details.
- ✗ Sharing personal login credentials.
- ✗ Forgetting to verify your email.

HOMework

- Complete the following:
 - ✓ Create a Meta Business Manager (Business Portfolio).
 - ✓ Add your Facebook Page.
 - ✓ Connect your Instagram account.
 - ✓ Create an Ad Account.
 - ✓ Add a payment method (if you're ready to run ads).

Lesson: How to Give Someone Access to Your Facebook Page

- There are two common ways to give someone access to your Facebook Page.

Method 1: Give Page Access (Recommended)

Step 1

- Open your Facebook Page.

Step 2

- Click Settings.

Step 3

- Go to Page Setup → Page Access (the name may vary slightly depending on Meta's current interface).

Step 4

- Click Add New or Add People.

Step 5

- Enter the person's:
 - Facebook name, or
 - Email (if prompted)

Step 6

- Choose the access level.

Types of Access

- ✓ Facebook Access (Full Control)
 - This person can:
 - Create and edit posts
 - Reply to messages and comments
 - Run ads
 - View insights
 - Manage page settings
 - Add or remove other people (if granted full control)
 - Only give Full Control to people you completely trust.
- ✓ Task Access
 - This person can:
 - Create ads
 - Publish content
 - Respond to messages
 - View analytics
 - They cannot take ownership of the Page or manage all settings.

Step 7

- Click Give Access.
- Facebook will ask you to enter your password to confirm.
- The invited person must accept the invitation before access becomes active.

Method 2: Through Meta Business Manager (Best for Agencies)

- If you're working with employees or clients, use Business Manager.

Steps

- Go to Business Settings.
- Click Users → People.
- Click Invite People.
- Enter their email address.
- Choose: ○ Employee Access ○ Admin Access
- Click Next.
- Select the Facebook Page.
- Choose the permissions you want to grant.

- Send the invitation.
- This is the preferred method for agencies because it lets you control access without sharing personal accounts.

Which Access Should You Give?

- Person
 - Recommended Access
- Social Media Manager
 - Task Access
- Meta Ads Expert
 - Ads/Task Access
- Graphic Designer
 - Content Access
- Business Partner
 - Full Control (only if fully trusted)
- Agency
 - Business Manager Access

Security Tips

- ✓ Enable Two-Factor Authentication (2FA) on your Facebook account.
- ✓ Never share your Facebook password.
- ✓ Give the minimum permissions needed.
- ✓ Remove access when someone no longer works with you.

Practical Exercise

- If you have a second Facebook account or a trusted colleague:
- Open your Facebook Page.
- Go to Page Access.
- Invite them with Task Access.
- Ask them to accept the invitation.
- Confirm they can access the Page.
- Once you're comfortable with access management, you're ready to collaborate safely with clients or team members while keeping your business secure.

5

Meta Ads Manager (Complete Beginner Guide)

- Today you'll learn the most important tool in Meta advertising: Meta Ads Manager. Almost every campaign you create will be managed here.

What is Meta Ads Manager?

- Meta Ads Manager is the platform where you:
- Create ads
- Manage campaigns
- Edit ads
- Set budgets
- Target audiences
- Track performance
- Optimize campaigns
- Think of it as the dashboard for all your advertising activities.

How to Open Ads Manager

- Method 1:
- Log in to your Facebook account.
- Go to business.facebook.com.
- Select your Business Portfolio.
- Click Ads Manager.
- Method 2:
- Visit adsmanager.facebook.com (while logged into your Facebook account).

Ads Manager Dashboard

- When you open Ads Manager, you'll see something similar to this:
- -----
- Campaigns | Ad Sets | Ads
- -----
- Create | Duplicate | Edit | A/B Test | More
- -----
- Performance Charts

- -----
- Campaign List
- -----
- Results | Reach | Impressions | CPC | CTR | Cost
- -----
- Let's understand each section.

1. Campaigns

- This is the highest level.
- A campaign answers one question:
- "What is my goal?"
- Examples:
- Get Leads
- Get Sales
- Increase Website Traffic
- Get More Messages
- You choose the campaign objective here.

2. Ad Sets

- The Ad Set decides who sees your ad and how it's delivered.
- Here you set:
- Audience
- Budget
- Schedule
- Placements
- Optimization
- Think of the Ad Set as the "strategy" layer.

3. Ads

- This is what people actually see.
- An ad contains:
- Image or Video
- Primary Text
- Headline
- Description (where applicable)

- Call-to-Action (CTA)

The Meta Ads Structure

- Campaign
 - |
 - | — Ad Set
 - | |
 - | | — Audience
 - | | — Budget
 - | | — Placements
 - | | — Schedule
 - | — Ad
 - | — Image/Video
 - | — Primary Text
 - | — Headline
 - | — CTA
- Remember this structure:
- Campaign → Ad Set → Ad
- You'll use it every time you create a campaign.

Create Button

- Click Create to start a new campaign.
- Meta will ask you to choose an objective such as:
 - Awareness
 - Traffic
 - Engagement
 - Leads
 - App Promotion
 - Sales
- We'll cover each objective in upcoming lessons.

Performance Metrics

- Ads Manager shows important data like:

- Metric
 - Meaning
- Results
 - Number of desired actions (leads, purchases, etc.)
- Reach
 - Unique people who saw your ad
- Impressions
 - Total number of times your ad was shown
- CPC
 - Cost Per Click
- CPM
 - Cost per 1,000 impressions
- CTR
 - Click-Through Rate
- Spend
 - Total amount spent
- These metrics help you understand if your campaign is performing well.

Filters

- You can filter campaigns by:
- Active
- Paused
- Completed
- Date Range
- Campaign Name
- This makes it easier to manage multiple campaigns.

Columns

- The Columns button lets you choose which metrics you want to see.
- Popular views include:
- Performance
- Performance and Clicks
- Engagement
- Video Engagement
- Conversions
- You can also create custom column layouts.

Breakdown

- The Breakdown option shows where your results are coming from.
- Examples:
 - Age
 - Gender
 - Country
 - Region
 - Device
- Placement (Facebook Feed, Instagram Reels, Stories, etc.)
- Today you'll learn the most important tool in Meta advertising: Meta Ads Manager. Almost every campaign you create will be managed here.

- The Breakdown option shows where your results are coming from.
- Examples:
 - Age
 - Gender
 - Country
 - Region
 - Device
 - Placement (Facebook Feed, Instagram Reels, Stories, etc.)
- This helps identify your best-performing audience segments.
- This helps identify your best-performing audience segments.

6

Campaign Objectives (Most Important Lesson)

- If you choose the wrong campaign objective, even a great ad can perform poorly.
- Meta uses your chosen objective to decide who to show your ads to. It doesn't just show ads to everyone—it tries to find people most likely to take the action you want.

What is a Campaign Objective?

- A Campaign Objective tells Meta:
- "What do I want people to do after seeing my ad?"
- For example:
- Visit my website
- Send a WhatsApp message
- Fill out a lead form
- Buy a product
- Watch my video
- Meta then optimizes delivery for that goal.

Meta Campaign Objectives

- Meta currently has 6 main objectives.
- 1. Awareness
- 2. Traffic
- 3. Engagement
- 4. Leads
- 5. App Promotion
- 6. Sales
- Let's understand each one.

1. Awareness

Goal

- Show your ad to as many relevant people as possible and increase brand recognition.

Best For

- New businesses

- Brand launches
- Political awareness campaigns
- Local shop promotions
- Event promotions

Example

- You open a new digital marketing institute in Kanpur.
- You want people to know it exists.
- Choose: Awareness

CTA

- Learn More
- Call Now

Don't Use Awareness If

- You want immediate sales or leads.

2. Traffic

Goal

- Send people to a destination.
- Destinations can include:
 - Website
 - Landing Page
 - WhatsApp
 - Messenger
 - Instagram Profile

Best For

- Blog posts
- Websites
- Course pages
- Product catalogs

Example

- You have a landing page for your ₹999 Meta Ads course.
- Choose: Traffic

CTA

- Learn More

- Visit Website

Important

- Traffic gets clicks, but clicks don't always become customers.

3. Engagement

Goal

- Encourage interactions with your content.
- Examples:
 - Likes
 - Comments
 - Shares
 - Reactions
 - Video Views
 - Messages
 - Followers (indirectly)

Best For

- Viral reels
- Brand engagement
- Building trust
- Community growth

Example

- You post:
 - "5 Meta Ads Mistakes Beginners Make"
- Run an Engagement campaign to get more interactions.

CTA

- Like
- Comment
- Send Message

4. Leads (One of the Most Used Objectives)

Goal

- Collect information from potential customers.
- Leads can come through:

- Instant Forms
- Website Forms
- WhatsApp
- Messenger
- Calls

Best For

- Coaching institutes
- Real estate
- Clinics
- Insurance
- Agencies
- Course sales

Example

- Your ad says:
- Learn Meta Ads for ₹999
- People click the ad and fill out a form with:
- Name
- Phone Number
- Email
- Now you have a lead you can follow up with.

CTA

- Sign Up
- Apply Now
- Get Quote

5. App Promotion

Goal

- Increase app installs or encourage app activity.

Best For

- Android apps
- iPhone apps
- Mobile games
- Delivery apps
- Fintech apps

Example

- You launch a food delivery app.
- Use App Promotion to encourage installs.

6. Sales (Best for E-commerce)

Goal

- Drive purchases or other valuable conversions.

Best For

- Online stores
- Shopify
- WooCommerce
- Product websites
- Fashion brands

Example

- You sell shoes online.
- Your website has:
 - Meta Pixel
 - Purchase tracking
 - Choose: Sales
- Meta will try to show ads to people who are more likely to complete a purchase.

CTA

- Shop Now
- Buy Now
- Order Now

Which Objective Should You Choose?

- Goal
 - Best Objective
- Brand Awareness
 - Awareness
- More Website Visitors
 - Traffic
- Likes, Comments, Shares
 - Engagement

- Collect Leads
 - Leads
- More App Installs
 - App Promotion
- Sell Products Online
 - Sales

Real Business Examples

Example 1: Coaching Institute

- Goal: Collect student inquiries.
- Objective: Leads

Example 2: Restaurant

- Goal: Increase local awareness.
- Objective: Awareness

Example 3: Clothing Brand

- Goal: Sell products through a website.
- Objective: Sales

Example 4: Blogger

- Goal: Get readers to a blog.
- Objective: Traffic

Example 5: Local Gym

- Goal: Receive WhatsApp inquiries for memberships.
- Objective: Leads (using WhatsApp as the conversion location)

Common Beginner Mistakes

- ✗ Using Traffic when the real goal is sales.
- ✗ Running Engagement campaigns expecting purchases.
- ✗ Using Awareness to generate leads.
- ✗ Choosing objectives based on the lowest CPC instead of the business goal.

Pro Tip

- Always ask yourself this question before creating a campaign:
- What is the one action I want people to take?

- Your answer determines the objective.
- Examples:
- "I want them to buy." → Sales
- "I want them to fill a form." → Leads
- "I want them to visit my website." → Traffic
- "I want them to watch my content and interact." → Engagement

Practical Exercise

- Imagine you have these businesses. Choose the correct objective:
- A coaching institute wants admission inquiries.
- An e-commerce store wants online purchases.
- A new café wants local people to know about it.
- A news website wants more visitors.
- A mobile app wants more installs.
- Try answering these yourself before checking:
- Answers:
- Leads
- Sales
- Awareness
- Traffic
- App Promotion
- Homework
- Open Meta Ads Manager and click Create. Look at the six campaign objectives and think about which one matches your own business goal (for example, your ₹999 Meta Ads course would typically use Leads or Sales, depending on how people enroll).

7

Audience Targeting (Beginner to Advanced)

- "The best ad shown to the wrong audience will fail. An average ad shown to the right audience can still perform well."
- Audience targeting is one of the biggest factors that determines whether your campaign succeeds.

What is Audience Targeting?

- Audience targeting means choosing who will see your ads.
- Instead of showing your ad to everyone, Meta lets you target people based on:
 - Location
 - Age
 - Gender
 - Interests
 - Behaviors
 - Languages
 - Previous interactions with your business

Types of Audiences

- There are 3 main audience types in Meta Ads.
 - 1. Core Audience
 - 2. Custom Audience
 - 3. Lookalike Audience
- Let's learn each one.

1. Core Audience (Cold Audience)

- These are people who don't know your business yet.
- You target them using:
 - Location
 - Age
 - Gender
 - Interests
 - Behaviors

- Example: You are selling a ₹999 Meta Ads Course.
- You can target people interested in:
- Digital Marketing
- Facebook Marketing
- Instagram Marketing
- Social Media Marketing
- Entrepreneurship
- This is called a Core Audience.

2. Custom Audience (Warm Audience)

- These people have already interacted with your business.
- Examples:
- Website visitors
- Facebook Page visitors
- Instagram profile visitors
- Video viewers
- People who messaged you
- Existing customers
- Email list
- Example:
- 500 people visited your course landing page but didn't buy.
- You can show ads only to those 500 people.
- This is Remarketing.

3. Lookalike Audience

- Meta finds new people who are similar to your existing customers.
- Example:
- You upload a list of 1,000 students.
- Meta finds thousands of people with similar characteristics and interests.
- This is a Lookalike Audience.

Audience Setup Inside an Ad Set

- When creating an Ad Set, you'll usually configure:

Location

- Examples:

- India
- Uttar Pradesh
- Kanpur
- Delhi
- Mumbai
- For local businesses, choose a city or radius.
- Example: A salon in Kanpur can target people within 10 km of the shop.

2. Age

- Examples:
- 18–24
- 25–34
- 35–44
- 45+
- Choose the age group that matches your customer.
- Example: A Meta Ads course may perform well with 18–40.

3. Gender

- Options:
- All
- Men
- Women
- If your product is for everyone, leave it on All.

4. Language

- Usually, leave this blank unless your campaign is specifically for people using a certain language.
- Example: If you're targeting only English-speaking users, you may specify English.

5. Detailed Targeting (Interests)

- This is where you add interests related to your audience.
- Example for a Meta Ads course:
- Digital Marketing
- Facebook Marketing

- Instagram Marketing Online Advertising Small Business Entrepreneurship Meta will try to find users interested in these topics. Behaviors describe how people use devices or interact with businesses. Examples include: Frequent online shoppers (availability varies by region) Business page admins Device usage categories Available behaviors change over time and differ by country. Audience Size Meta shows an estimated audience size. Very small audiences can limit delivery. Very large audiences may reduce relevance. For beginners, test audiences that are neither extremely narrow nor extremely broad, then optimize based on results. Advantage+ Audience Meta can automatically expand beyond your suggestions if it predicts better results. Benefits: Uses AI to find potential customers. Often works well for conversion-focused campaigns with enough data. Use it after you have a clear offer and tracking in place. Real Example

Business: Shubh Marketing – Meta Ads Course

Objective: Leads

Audience Location India Age 18–40 Gender All Interests Digital Marketing Facebook Marketing Instagram Marketing Meta Business Suite Entrepreneurship This is a solid starting audience to test. **Common Mistakes Targeting too many unrelated interests. Making the audience so narrow that Meta struggles to deliver. Ignoring location. Never testing new audiences. Best Practices Start with one clear audience. Test different audience groups separately. Build Custom Audiences from website visitors and video viewers. Create Lookalike Audiences from your best customers once you have enough data. Practical Exercise** Imagine you're promoting your ₹999 Meta Ads Course. Create a sample audience: Location: _____ Age: _____ Gender: _____ Top 5 Interests: _____ For example: Location: India Age: 18–40 Gender: All Interests: ☐ Digital Marketing ☐ Facebook Marketing ☐ Instagram Marketing ☐ Small Business ☐ Entrepreneurship **Homework In Meta Ads Manager:**

- Start creating a new campaign (you don't need to publish it). Go to the Ad Set level. Explore the Audience section. Try setting: ☐ India ☐ Age 18–40 ☐ Gender: All ☐ A few relevant interests Observe how the estimated audience changes when you adjust your targeting. Lesson 8 Preview In the next lesson, you'll learn Budget & Bidding, including: Daily Budget vs Lifetime Budget Campaign Budget Optimization (CBO)

8

Budget & Bidding (One of the Most Important Topics)

- Your budget controls how much you spend. Your bidding strategy controls how Meta tries to get results with that budget.
- Many beginners think:
- "If I spend ₹10,000, I'll definitely get good results."
- That's not true.
- A well-optimized ₹500/day campaign can outperform a poorly managed ₹5,000/day campaign.

What is a Budget?

- A budget is the maximum amount you're willing to spend on your ads.
- Example:
- ₹300/day means Meta can spend up to about ₹300 each day.
- A ₹9,000 monthly budget is roughly ₹300/day.

Types of Budget

- Meta mainly offers two types:

1. Daily Budget

- You tell Meta how much to spend per day.

Example

- Daily Budget = ₹300
- Meta will try to spend around ₹300 each day while optimizing delivery.

Best For

- Always-on campaigns
- Lead generation
- Local businesses
- Beginners
- ✓ Recommended for most new advertisers.

2. Lifetime Budget

- You set one budget for the entire campaign.

Example

- Campaign Duration = 10 Days
- Lifetime Budget = ₹3,000
- Meta decides how much to spend each day, but it won't exceed the total lifetime budget.

Best For

- Limited-time promotions
- Festivals
- Events
- Fixed-date campaigns

Daily vs Lifetime Budget

- Daily Budget
 - Lifetime Budget
- Spend is planned per day
 - Spend is managed across the campaign
- Easy to scale
 - Good for scheduled campaigns
- Great for beginners
 - Great for promotions with an end date

Campaign Budget Optimization (CBO)

- In CBO, you set the budget at the Campaign level.
- Example:
- Campaign Budget = ₹1,500/day
- You have 3 ad sets.
- Meta automatically distributes the budget to the ad sets that are performing best.
- Campaign Budget ₹1500
- 
- 
- Ad1 Ad2 Ad3
- Meta shifts more budget to the better performers.

Advantages

- Automatic optimization
- Less manual work
- Good when testing several audiences

Ad Set Budget Optimization (ABO)

- In ABO, you set a separate budget for each Ad Set.
- Example:
 - Ad Set 1 = ₹300/day
 - Ad Set 2 = ₹300/day
 - Ad Set 3 = ₹300/day
- Each ad set spends its own budget independently.

Advantages

- Better control
- Ideal for testing audiences
- Easier to compare performance

CBO vs ABO

- CBO
 - ABO
- Budget at Campaign level
 - Budget at Ad Set level
- Meta decides distribution
 - You decide distribution
- Good for scaling
 - Good for testing

Beginner Recommendation

- Testing new audiences → ABO
- Scaling winning campaigns → CBO

What is Bidding?

- When multiple advertisers want to show ads to the same audience, Meta runs an auction.
- The winner isn't simply the highest bidder.
- Meta considers:

- Your bid strategy
- Ad quality
- Expected user response
- This helps show people ads that are both relevant and valuable.

Common Bid Strategies

Highest Volume (Recommended)

- Meta tries to get the maximum number of results within your budget.
- Example: Budget = ₹500/day
- Meta aims to generate as many leads, clicks, or purchases as possible.
- ✓ Best for beginners.

Cost Per Result Goal (when available)

- You tell Meta your desired average cost per result.
- Example:
- Target Lead Cost = ₹100
- Meta tries to keep your average cost close to that goal if possible.
- This may reduce delivery if the target is unrealistic.

Learning Phase

- When a new campaign starts, Meta enters the Learning Phase.
- During this time, Meta is collecting data to understand who is most likely to take your desired action.
- Avoid making major edits during this period because frequent changes can restart learning.
- Examples of major edits include:
- Large budget changes
- Changing the audience
- Switching the optimization goal

How Much Budget Should Beginners Start With?

- Here are common starting points:
- Goal
 - Suggested Daily Budget

- Lead Generation
 - ₹300–₹500
- Website Traffic
 - ₹200–₹300
- Local Business
 - ₹300–₹500
- E-commerce Sales
 - ₹500–₹1,000 (depending on product price and data)
- The right budget depends on your industry, competition, and goals.

Example

Business

- Shubh Marketing – Meta Ads Course

Campaign

- Objective: Leads

Budget

- Daily Budget: ₹300

Audience

- India
- 18–40 Years
- Digital Marketing Interests

Bid Strategy

- Highest Volume
- This is a practical beginner setup.

Budget Scaling

- Suppose your campaign is generating good leads.
- Instead of doubling the budget overnight, increase it gradually.
- For example:
 - Day 1: ₹300
 - Day 3: ₹400
 - Day 5: ₹500
- Gradual changes help maintain stability.

Common Beginner Mistakes

- ✗ Starting with a very high budget before testing.
- ✗ Changing the budget several times a day.
- ✗ Expecting profitable results within a few hours.
- ✗ Turning campaigns on and off repeatedly.

Best Practices

- ✓ Start with ₹300–₹500/day if it fits your budget.
- ✓ Use ABO when testing different audiences.
- ✓ Switch to CBO when you have winning ad sets.
- ✓ Let campaigns collect enough data before making decisions.

Practical Exercise

- Imagine you're promoting your ₹999 Meta Ads course.
- Create a sample setup:
 - Objective: Leads
 - Budget: ₹300/day
 - Budget Type: Daily
 - Budget Optimization: ABO
 - Bid Strategy: Highest Volume
- Think about why each choice makes sense.

HOMEWORK

- Create a draft campaign in Ads Manager (don't publish it):
 - Choose the Leads objective.
 - Set a Daily Budget of ₹300.
 - Use ABO if you're testing one or more audiences.
 - Keep the default bid strategy (Highest Volume, if available).
 - Review the settings before exiting.

9

Placements (Where Your Ads Appear)

- Placement = The location where your ad is shown.
- When you create a Meta ad, you can choose where people will see it.
- For example:
 - Facebook Feed
 - Instagram Feed
 - Instagram Reels
 - Facebook Stories
 - Messenger
 - Audience Network
- Choosing the right placements can improve your campaign performance.

What are Placements?

- Placements are the apps and positions where Meta displays your ads.
- Example:
 - You create one ad.
 - Meta can automatically show it in:
 - Facebook Feed
 - Instagram Feed
 - Facebook Stories
 - Instagram Stories
 - Reels
 - Messenger
 - Audience Network

Two Types of Placements

1. Advantage+ Placements (Recommended)

- This is Meta's automatic placement option.
- Meta decides where to show your ad based on where it predicts the best results.

Example

- Your ad may receive:

- 40% of impressions on Instagram Reels
- 30% on Facebook Feed
- 20% on Instagram Stories
- 10% on Messenger
- You don't need to decide manually.

Advantages

- Best for beginners
- Uses Meta's machine learning
- Can reduce cost per result
- ✓ Recommended for most campaigns unless you have a specific reason to limit placements.

2. Manual Placements

- You choose exactly where your ad will appear.
- Example:
 - Facebook Feed
 - Instagram Feed
 - ✗ Audience Network
 - ✗ Messenger
- Use manual placements when you have creative designed for a specific format or when testing placement performance.

Main Placements

1. Facebook Feed

- This is the main news feed where users scroll.
- Best for:
 - Images
 - Carousels
 - Videos
 - Lead generation
 - Product promotions

2. Instagram Feed

- Ads appear in the regular Instagram feed.

- Best for:
- Fashion
- Beauty
- Lifestyle
- Courses
- Personal brands

3. Facebook Stories

- Vertical full-screen ads.
- Recommended Size: 1080 × 1920 px
- Best for:
- Quick offers
- Local businesses
- Limited-time promotions

4. Instagram Stories

- One of the most engaging placements.
- Best for:
- Flash sales
- Events
- Course promotions
- Brand awareness
- Use:
- Vertical videos
- Strong CTA
- Minimal text

5. Instagram Reels

- Very popular for short-form video.
- Best for:
- Educational content
- Product demonstrations
- Personal branding
- Entertaining promotions
- Recommended video length: 15–30 seconds for many campaigns, though Meta supports longer videos.

6. Facebook Reels

- Works similarly to Instagram Reels.
- Good for:
- Local businesses
- Service businesses
- Short video ads

7. Messenger

- Ads appear in Messenger.
- Best for:
- Message campaigns
- Customer support
- Appointment booking

8. Audience Network

- Meta shows your ads in partner apps and websites.
- Advantages:
- Can increase reach
- Consideration:
- Performance varies by campaign type, so monitor results before deciding whether to keep or exclude it.

Placement Comparison

- Placement
 - Best For
- Facebook Feed
 - Lead Generation, Local Business
- Instagram Feed
 - Fashion, Personal Brand, Courses
- Stories
 - Offers, Promotions
- Reels
 - Video Marketing, Brand Awareness
- Messenger
 - Customer Conversations

- Audience Network
 - Additional Reach (test performance)

Placement Sizes

- Placement
 - Recommended Size
- Feed
 - 1080 × 1080 px
- Stories
 - 1080 × 1920 px
- Reels
 - 1080 × 1920 px
- Designing creatives specifically for each format often improves results.

Example

Business

- Shubh Marketing

Campaign

- Lead Generation

Creative

- Vertical video explaining the Meta Ads course.

Best Placements

- ✓ Instagram Reels
- ✓ Instagram Stories
- ✓ Facebook Feed
- Using Advantage+ Placements allows Meta to decide how to distribute impressions.

Should You Use Manual Placements?

Use Advantage+ Placements if:

- You're a beginner.
- You have one creative that works across formats.
- You want Meta to optimize delivery.

Use Manual Placements if:

- You're testing specific placements.
- Your creative is made only for Feed or only for Stories/Reels.
- You have data showing certain placements perform better.

Common Beginner Mistakes

- ✗ Turning off placements without testing.
- ✗ Using square images (1080×1080) for Stories and Reels.
- ✗ Ignoring how the creative looks in different placements.
- ✗ Assuming one placement is always the best.

Best Practices

- ✓ Use Advantage+ Placements when starting.
- ✓ Create:
 - 1080×1080 creatives for Feeds.
 - 1080×1920 creatives for Stories and Reels.
- ✓ Check the Placement Breakdown in Ads Manager after your campaign runs to see which placements generate the best results.

Practical Exercise

- Imagine you're advertising your ₹999 Meta Ads course.
- Choose placements for:
 - Awareness campaign
 - Lead generation campaign
 - Sales campaign
- A possible answer:
 - Awareness → Advantage+ Placements
 - Lead Generation → Advantage+ Placements (or test Feed + Reels)
 - Sales → Advantage+ Placements

HOMework

- Open Ads Manager and create a draft campaign.
- At the Ad Set level:
 - Find the Placements section.
 - Compare Advantage+ Placements and Manual Placements.

- Click through the available placements and see how they are organized.
- At the Ad level, use the preview tool to see how your ad would look in Feed, Stories, and Reels.

10

Creative Strategy (How to Create High-Converting Ads)

- "Targeting gets people to see your ad. Creative convinces them to take action."
- Many advertisers think they fail because of audience targeting, but often the real issue is a weak creative.
- In this lesson, you'll learn how to create ads that attract attention and encourage people to click.

What is an Ad Creative?

- An ad creative is everything your audience sees in the ad.
- It includes:
 - Image or Video
 - Primary Text
 - Headline
 - Description (when applicable)
 - Call-to-Action (CTA)
- Example:
 - Image/Video
 - ↓
 - Primary Text
 - ↓
 - Headline
 - ↓
 - CTA Button (Learn More / Sign Up)

The 5 Elements of a High-Converting Ad

1. Hook (First 3 Seconds)

- The hook is the first thing people notice.
- If the hook is weak, users will scroll past your ad.

Good Hooks

- Stop wasting money on Facebook Ads!
- Want more leads for your business?

- Learn Meta Ads in just 30 days.
- Still boosting posts? Read this first.
- Are your ads getting clicks but no sales?

2. Problem

- Show that you understand your audience.
- Example:
 - ✗ Spending money on ads but getting no leads?
 - ✗ Running campaigns without knowing what works?
- People pay attention when they recognize their own problems.

3. Solution

- Present your offer clearly.
- Example:
- Learn Meta Ads step by step with live practical training and real campaign examples.

4. Benefits

- Instead of only listing features, explain the outcome.

Feature

- 30 video lessons

Benefit

- Learn at your own pace and revisit lessons anytime.
- More examples:
- Features:
 - Live support
 - Certificate
 - Practical projects
- Benefits:
 - Get answers when you're stuck.
 - Add a certificate to your portfolio.
 - Build confidence by running real campaigns.

5. Call-to-Action (CTA)

- Tell users exactly what to do next.
- Examples:
- Enroll Now
- Learn More
- Sign Up
- Contact Us
- Send WhatsApp Message
- Shop Now
- Don't assume users know the next step.

Primary Text Formula

- Use this simple structure:
- Hook
- ↓
- Problem
- ↓
- Solution
- ↓
- Benefits
- ↓
- CTA

Example

- Want to learn Meta Ads and generate quality leads?
- Join our practical Meta Ads course and learn campaign setup, targeting, creatives, and optimization with real examples.
- ✓ Live guidance Practical assignments Certificate

→ *Enroll today to start building your digital marketing skills.*

Headline Formula

- Keep headlines short and benefit-focused.
- Examples:
- Learn Meta Ads in 30 Days
- Master Facebook & Instagram Ads

- Grow Your Business with Meta Ads
- Practical Meta Ads Course
- Start Running Better Campaigns

Image vs Video Ads

Image Ads

- Best for:
- Local businesses
- Product launches
- Offers
- Clinics
- Restaurants
- Tips:
- Use high-quality images.
- Keep text on the image minimal.
- Highlight the main benefit.

Video Ads

- Best for:
- Courses
- Coaching
- Personal brands
- Demonstrations
- Testimonials
- Tips:
- Capture attention in the first few seconds.
- Use captions because many users watch without sound.
- Show the product or instructor early.

Carousel Ads

- A carousel lets you show multiple cards.
- Great for:
- Product catalogs
- Before-and-after examples

- Step-by-step processes
- Service showcases
- Example for a Meta Ads course:
 - Card 1 – Introduction
 - Card 2 – Audience Targeting
 - Card 3 – Meta Pixel
 - Card 4 – Campaign Optimization
 - Card 5 – Enroll Now

Creative Sizes

- Placement
 - Recommended Size
- Feed
 - 1080 × 1080 px
- Stories
 - 1080 × 1920 px
- Reels
 - 1080 × 1920 px

Colors That Often Work Well

- Blue → Trust
- Green → Growth
- Orange → Energy
- Red → Urgency (use carefully)
- White → Clean and professional
- Keep branding consistent across your ads.

Creative Checklist

- Before publishing, ask yourself:
- Does the first line grab attention?
- Is the problem clear?
- Is the solution easy to understand?
- Are the benefits obvious?
- Is there a clear CTA?

- Is the image or video high quality?
- If you answer "No" to any of these, improve the creative before launching.

Real Example

Business

- Shubh Marketing

Offer

- Meta Ads Course – ₹999

Primary Text

- Want to learn Meta Ads from scratch? Join our practical course and learn campaign setup, audience targeting, creatives, optimization, and more through real examples. Build skills you can apply to your own business or clients.

Headline

- Master Meta Ads in 30 Days

CTA

- Sign Up

Common Beginner Mistakes

- ✗ Writing very long paragraphs with no spacing.
- ✗ Using low-quality or blurry images.
- ✗ Not including a CTA.
- ✗ Focusing only on features instead of benefits.
- ✗ Using clickbait or misleading claims that don't match the offer.

Best Practices

- ✓ Use a strong hook.
- ✓ Focus on the customer's problem.
- ✓ Explain benefits, not just features.
- ✓ Use a single, clear CTA.
- ✓ Test different creatives to see what performs best.

Practical Assignment

- Create one ad for your Meta Ads course.
- Write:
 - Hook
 - Primary Text
 - Headline
 - CTA
- Example:
 - Hook: "Still boosting posts without results?"
 - Primary Text: Explain the problem, solution, and benefits.
 - Headline: "Learn Meta Ads in 30 Days"
 - CTA: "Sign Up"

HOMEWORK

- Create three different ad creatives:
 - Image Ad
 - Video Ad
 - Carousel Ad
- Each should have:
 - A different hook
 - A different headline
 - A suitable CTA
- Compare them later to see which style performs best.

11.1

What is a Lead?

Definition

- A Lead is a person who shows interest in your business by sharing their contact information or contacting you.
- Examples:
 - Filling out a form
 - Sending a WhatsApp message
 - Calling your business
 - Sending a Messenger message
 - Requesting a quote

Real-Life Example

- Suppose you run a Meta Ads Course.
- You create an ad:
 - Learn Meta Ads in 30 Days – Enroll Now
- A user clicks your ad and fills in:
 - Name: Rahul Sharma
 - Phone: 9876543210
 - Email: rahul@gmail.com
- Rahul has not bought your course yet, but he has shown interest.

→ *Rahul is called a Lead.*

Customer Journey

- Person sees your ad
- ↓
- Clicks the ad
- ↓
- Fills the form / Sends WhatsApp message
- ↓
- Becomes a Lead
- ↓

- You contact the lead

↓

- Lead becomes a Customer

Lead vs Customer

- Lead
 - Customer
- Interested in your product/service
 - Has already purchased
- Shares contact details
 - Makes a payment
- Needs follow-up
 - Already converted
- Example:
- Rahul fills out your form → Lead
- Rahul pays ₹999 for your course → Customer

Why Are Leads Important?

- Without leads, you have no potential customers to follow up with.
- Most businesses generate leads first and then convert them into customers through calls, WhatsApp, emails, or meetings.

HOMEWORK

- What is a lead?
- Is a person who sends you a WhatsApp message a lead?
- Is every lead automatically a customer?
- What is the difference between a lead and a customer

- Goal: Learn how to run Meta Ads that generate actions on your website like purchases, registrations, bookings, or enquiries.

What are Website Conversion Ads?

- Website conversion ads are campaigns where you send people to your website and encourage them to complete a specific action.
- Examples:
 - Buy a product
 - Submit a form
 - Book an appointment
 - Register for a course
 - Download a file

Example

- You have a website selling a Meta Ads Course.
- Flow:
 - Facebook / Instagram Ad
 - ↓
 - Landing Page
 - ↓
 - User Reads Course Details
 - ↓
 - Clicks Buy Now
 - ↓
 - Payment Completed
 - ↓
 - Customer
- This is called a conversion journey.

Why Website Conversion Ads?

- Because website actions are more valuable than just clicks.

- Example:
 - ✗ 1,000 people clicked your ad 20 people purchased your product
- The goal is not only getting traffic — the goal is getting results.

Requirements Before Running Conversion Ads

- You need:

1. Website

- Example:
- Landing page
- Product page
- Course page

2. Meta Pixel

- Pixel helps Meta understand what visitors do on your website.
- It tracks:
- Who visited your page
- Who clicked buttons
- Who added products
- Who purchased

3. Conversion Events

- Events tell Meta what action you want to track.
- Examples:

Page View

- Someone visits your page.

View Content

- Someone views your product/course page.

Add To Cart

- Someone adds a product.

Initiate Checkout

- Someone starts payment.

Purchase

- Someone completes payment.

Lead

- Someone submits a form.

Meta Pixel Example

- Without Pixel:
- User clicks ad
- ↓
- Visits website
- ↓
- Meta does not know what happened
- With Pixel:
- User clicks ad
- ↓
- Visits website
- ↓
- Views product
- ↓
- Purchases
- ↓
- Meta learns who converts

Campaign Objective for Website Sales

- For selling products:
 - ✓ Choose Sales Objective
- For website enquiries:
 - ✓ Choose Leads Objective

Example: E-commerce Store

- Business: Online Shoe Store
- Campaign:
- Objective: Sales
- Audience: People interested in shoes/fashion
- Budget: ₹500/day
- Tracking: Purchase Event
- Meta will try to find people who are more likely to buy.

What is ROAS?

- ROAS = Return On Ad Spend
- Formula:
- $\text{ROAS} = \text{Revenue} \div \text{Ad Spend}$
- Example:
- You spend: ₹5,000 on ads
- You get: ₹20,000 sales
- ROAS:
- $20,000 \div 5,000 = 4$
- Your ROAS is 4x
- Meaning:
- For every ₹1 spent, you generated ₹4 revenue.

Common Website Conversion Mistakes

- ✗ Running sales ads without Pixel.
- ✗ Sending traffic to a slow website.
- ✗ Poor landing page design.
- ✗ No clear Buy Now button.
- ✗ Not tracking purchases.

Best Practices

- ✓ Install Pixel before running ads.
- ✓ Create a dedicated landing page.
- ✓ Test different creatives.
- ✓ Track purchases and leads.
- ✓ Optimize based on data.

Practical Example

Your Business:

- Meta Ads Course ₹999
- Campaign:
- Objective: Sales
- Website: Course landing page
- Event: Purchase

- Budget: ₹500/day
- Ad: Video explaining course benefits
- CTA: Enroll Now

HOMEWORK

- Answer these:
- What is a website conversion?
- Why do we use Meta Pixel?
- Which objective is used for product sales?
- What does ROAS measure?

Next Class: Lesson 13

- Meta Pixel Setup & Events
- You will learn:
- What is Pixel?
- How to create Pixel
- Install Pixel on WordPress
- Setup Events
- Test Pixel
- Understand Event Manager

13

Meta Pixel Setup & Events (Tracking System)

- Meta Pixel is the bridge between your website and Meta Ads.
- Without Pixel, Meta cannot properly understand what people do after clicking your ad.

What is Meta Pixel?

- Meta Pixel is a small piece of code that you add to your website.
- It helps you track:
 - Website visitors
 - Product views
 - Leads
 - Add to Cart actions
 - Purchases
 - Registrations

Simple Example

Without Pixel:

- Person sees Ad
- ↓
- Clicks Website
- ↓
- Leaves Website
- Meta does not know what happened

With Pixel:

- Person sees Ad
- ↓
- Clicks Website
- ↓
- Views Product
- ↓
- Adds to Cart
- ↓
- Purchases

- Meta learns who converts

Why Do We Need Pixel?

1. Conversion Tracking

- You can know:
- How many purchases came from ads
- How many leads came from ads
- Cost per purchase
- Cost per lead

2. Better Optimization

- Meta learns:
- "Which type of people are buying?"
- Then it finds more similar people.

3. Remarketing

- You can show ads again to:
- Website visitors
- Product viewers
- Cart abandoners
- Example:
- Someone visits your course page but doesn't buy.
- You show them a reminder ad.

Important Pixel Events

- Events tell Meta what action happened.

1. PageView

- User visits any page.
- Example:
- Someone opens your website homepage.

2. ViewContent

- User views an important page.
- Example:
- Product page or course page.

3. AddToCart

- User adds a product to cart.
- Example:
- Clicks "Add to Cart" on a shoe website.

4. InitiateCheckout

- User starts checkout.
- Example:
- Enters payment page.

5. Purchase

- Most important event.
- User completes payment.
- Example:
- Customer buys your ₹999 course.

6. Lead

- User submits information.
- Example:
- Fills admission form.

Pixel Funnel Example

- 1000 Website Visitors
- ↓
- 300 View Content
- ↓
- 100 Add To Cart
- ↓

- 50 Checkout

↓

- 20 Purchases
- You can identify where people are dropping.

How to Create Meta Pixel

Step 1

- Open:
- Meta Business Suite

↓

- Events Manager

Step 2

- Click:
- Connect Data Sources

Step 3

- Select:
- Web

Step 4

- Choose:
- Meta Pixel

Step 5

- Enter:
- Pixel Name
- Website URL
- Click Create.

Installing Pixel

- There are different methods:

Method 1: WordPress

- Using plugins:
- PixelYourSite
- GTM4WP

- Official Meta plugin

Method 2: Google Tag Manager

- Professional method.
- Steps:
- Create GTM account
- Add Meta Pixel tag
- Publish container

Method 3: Manual Code

- Developer adds Pixel code inside website header.

How to Check Pixel

- Use:
- Meta Pixel Helper Chrome Extension
- It shows:
- ✓ Pixel active
- ✓ Events firing
- ✓ Errors

Event Manager

- In Events Manager you can see:
- Event activity
- Data sources
- Event quality
- Diagnostics

Example For Meta Ads Course

- Website:
 - Landing Page
 - Track:
 - Page View
- ↓
- View Content

↓

- Lead Form Submit

↓

- Purchase
- This helps Meta find students who are likely to enroll.

Common Pixel Mistakes

- ✗ Installing Pixel twice
- ✗ Wrong event setup
- ✗ Not testing events
- ✗ Running sales campaigns without tracking
- ✗ Ignoring event errors

Practical Assignment

- Create a practice plan:
- Business: Meta Ads Course
- Events:
- Landing page visit → PageView
- Course page visit → ViewContent
- Form submission → Lead
- Payment → Purchase

Quick Quiz

- What is Meta Pixel?
- Why is Pixel important for ads?
- Which event tracks a purchase?
- Which event tracks a lead form submission?
- What tool checks if Pixel is working?

LESSON 14 PREVIEW:

- Remarketing Campaigns
- You will learn:
- Website visitor ads
- Cart abandonment ads
- Video viewer retargeting
- Instagram/Facebook engagement audiences

- Creating Custom Audiences for remarketing.

14

Remarketing Campaigns (Retargeting)

- Remarketing means showing ads again to people who have already interacted with your business.
- Most people don't buy the first time they see an ad. Remarketing helps you bring those people back.

What is Remarketing?

- Example:
- A person visits your website and checks your Meta Ads Course but does not purchase.
- Later, they see another ad:
- "Still want to learn Meta Ads? Join our practical course today."
- This is called Remarketing.

Why is Remarketing Important?

- Because these people already know your brand.
- They are more likely to:
- Click your ad
- Contact you
- Purchase your product
- Cold audience = New people Warm audience = People who already interacted

Remarketing Funnel

- New Audience
- ↓
- Sees Your Ad
- ↓
- Visits Website
- ↓
- Doesn't Buy
- ↓
- Remarketing Ad
- ↓

- Purchase / Lead

Types of Remarketing Audiences

1. Website Visitors

- People who visited your website.
- Example:
 - 1000 people visited your course page.
 - You show them a reminder ad.
- Requirement: Meta Pixel installed

2. Add To Cart Audience

- People who added products but didn't buy.
- Example:
 - Customer added shoes to cart but left.
 - Show:
 - "Your selected shoes are waiting. Complete your order today."

3. Customer List Audience

- Upload your existing customer data.
- Data can include:
 - Phone numbers
 - Emails
- Example:
 - Previous students.
 - You can advertise:
 - Advanced courses
 - New offers

4. Instagram Engagement Audience

- People who interacted with your Instagram.
- Includes:
 - Profile visitors
 - Post likes

- Comments
- Saves
- Shares
- Messages

5. Facebook Page Engagement Audience

- People who interacted with your Facebook Page.
- Example:
 - Reacted to posts
 - Watched videos
 - Sent messages

6. Video View Audience

- People who watched your videos.
- Example:
 - Someone watched 50% of your Meta Ads course video.
 - You can show them an enrollment ad.

How to Create Custom Audience

Step 1

- Open:
 - Meta Ads Manager
- ↓
- Audiences

Step 2

- Click:
 - Create Audience
- ↓
- Custom Audience

Step 3

- Choose Source:
 - Examples:
 - Website
 - Instagram Account

- Facebook Page
- Video
- Customer List

Step 4

- Set Conditions
- Example:
- Website visitors in last 30 days.

Step 5

- Name Your Audience
- Example:
- "Website Visitors 30 Days"

Remarketing Campaign Example

Business:

- Meta Ads Course ₹999

Audience:

- Website visitors - Last 30 days

Ad:

- "Visited our course page but didn't enroll?"
- Learn Meta Ads with practical training.

CTA:

- Enroll Now

Remarketing Time Periods

- Common windows:

7 Days

- Very recent visitors.
- Good for:
- Hot leads
- Cart abandoners

30 Days

- Balanced audience.
- Good for:
- Courses
- Services

180 Days

- Larger audience.
- Good for:
- Brand campaigns

Cold vs Warm vs Hot Audience

- Audi
– e n ce
– Example
– Strat egy
- C ol d
– Never heard of you
– Awar enes s
- W ar m
– Visited website
– Rem arketi ng
- H ot
– Added cart/contacte d
– Stron g offer

Common Remarketing Mistakes

- ✗ Showing same ad again and again.
- ✗ Targeting people who already purchased.
- ✗ Not excluding existing customers.
- ✗ No new offer or message.

Best Practices

- ✓ Change creative for remarketing.
- Example:
- Cold Ad: "Learn Meta Ads"

- Remarketing Ad: "Still interested? Join before enrollment closes."
- ✓ Use social proof:
 - Reviews
 - Testimonials
 - Results
 - Student feedback
- ✓ Create urgency:
 - Examples:
 - Limited seats
 - Special offer
 - Last date
 - (Only use genuine urgency.)

Practical Assignment

- Create a remarketing plan:
 - Business: Meta Ads Course
 - Audience: Website visitors (30 days)
 - Ad Message:
 - "Still planning to learn Meta Ads? Start your practical training today."
 - CTA: Enroll Now

HOMEWORK

- What is remarketing?
- Which tool is required for website remarketing?
- What is the difference between cold and warm audiences?
- Name three custom audiences.

Lesson 15 Preview:

- A/B Testing & Campaign Testing
- You will learn:
 - What to test
 - Creative testing
 - Audience testing
 - Budget testing

- Finding winning ads

- A/B Testing means comparing two different versions of an ad to find which one performs better.
- Instead of guessing what works, you test it with real data.

1. Simple Example

- You want to promote your ₹999 Meta Ads Course.
- You create two ads:
- Ad A: Video of the instructor explaining the course Ad B: Student testimonial video
- Keep the audience and other important settings the same.
- After collecting enough data:
- Ad A → ₹120 per lead
- Ad B → ₹75 per lead

→ Ad B is the better performer based on cost per lead.

2. What Can You Test?

- There are four important things to test.

A. Creative Testing

- Test:
- Image vs Video
- Different hooks
- Different thumbnails
- Different headlines
- Different offers
- Example:
- Creative A: "Learn Meta Ads in 30 Days"
- Creative B: "Stop Wasting Money on Facebook Ads"

B. Audience Testing

- Example:
- Ad Set A
- Age 18–25

- Digital Marketing interests
- Ad Set B
- Age 26–40
- Entrepreneurship interests
- Compare the results.

C. Copy Testing

- Test different primary texts.
- Version A: Problem-focused
- Getting clicks but no customers from your ads?
- Version B: Benefit-focused
- Learn how to create and optimize Meta Ads with practical training.

D. Placement Testing

- Compare:
- Facebook Feed
- Instagram Feed
- Reels
- Stories
- However, don't automatically assume one placement is better. Let the campaign generate data before making decisions.

3. The Golden Rule of A/B Testing

Change ONE major variable at a time.

- ✗ Bad test:
- Ad A:
- Different audience
- Different video
- Different budget
- Different copy
- Ad B:
- Different audience
- Different video
- Different budget
- Different copy
- If B wins, you don't know why.

Good test:

- Keep everything the same and change only the creative.
- Audience → Same
- Budget → Same
- Placement → Same
- Objective → Same
- Creative A → Video 1
- Creative B → Video 2
- Now the comparison is much more useful.

4. What Metrics Should You Compare?

- For a Lead Campaign, watch:

Cost Per Lead (CPL)

- $\text{CPL} = \text{Amount Spent} \div \text{Number of Leads}$
- Example:
- ₹1,000 spent 20 leads
- $\text{CPL} = ₹50$

CTR

- Click-Through Rate
- Shows how many people clicked relative to impressions.
- A higher CTR can indicate that your creative is attracting attention, but it doesn't guarantee good leads.

CPC

- Cost Per Click
- Shows how much each click costs.

Lead Quality

- This is extremely important.
- Suppose:
- Ad A
- 50 leads
- 10 qualified
- Ad B
- 25 leads
- 15 qualified

- Ad B may actually be better even though it generated fewer leads.

5. Don't Optimize Only for Cheap Leads

- This is a very important professional lesson.
- Example:
 - e a d s
 - Co st/ Le ad
 - Qualifie d Leads
 - 0 0
 - ₹3 0
 - 5
 - 5 0
 - ₹5 0
 - 20
- Ad A looks cheaper.
- But Ad B generates more qualified leads.

→ Always connect ad performance to the actual business result.

6. How Long Should You Test?

- Don't decide a winner after only a few hours.
- Give your campaign enough time and data to make a meaningful comparison.
- The amount of data needed depends on:
 - Budget
 - Audience size
 - Conversion volume
 - Campaign objective

7. Finding a Winning Creative

- Suppose you have:

Creative A

- ₹90 CPL

Creative B

- ₹60 CPL

Creative C

- ₹150 CPL
- After considering sufficient data and lead quality:
- Creative B → Best Creative A → Continue testing Creative C → Consider replacing
- Don't automatically kill an ad just because it is temporarily behind.

8. Scaling the Winner

- Once you identify a strong performer, you can gradually increase its budget or expand testing around it.
- Example:
- Winning Ad
- ↓
- Test new hook
- ↓
- Test new video
- ↓
- Test new headline
- ↓
- Find another winner
- This creates a continuous testing system.

9. A/B Testing Example for Your ₹999 Course

Campaign:

- Leads

Audience:

- India, 18–40

Test:

- Ad A
- Instructor video
- Hook: "Learn Meta Ads from zero"
- Ad B
- Student testimonial
- Hook: "I learned Meta Ads practically"
- Keep the main audience and campaign setup consistent.

- After enough data, compare:
- Spend
- Leads
- CPL
- CTR
- CPC
- Qualified leads

10. Common Beginner Mistakes

- ✗ Changing everything at once.
- ✗ Declaring a winner too quickly.
- ✗ Testing too many variables with a tiny budget.
- ✗ Looking only at CTR.
- ✗ Ignoring lead quality.
- ✗ Making constant edits while the campaign is still collecting data.
- Practical Assignment
- Create two ads for your ₹999 Meta Ads course.

Ad A

- Hook: "Learn Meta Ads from Beginner to Advanced"

Ad B

- Hook: "Stop Wasting Money on Facebook & Instagram Ads"
- Keep the audience, objective, and budget as consistent as possible.
- Then compare:
- CTR
- CPC
- Leads
- Cost per Lead
- Qualified Leads

Lesson 15 Homework

- Answer these 5 questions:
- What is A/B testing?
- Why should we change only one major variable at a time?
- What is CPL?
- Why isn't the cheapest lead always the best lead?

- Name three things you can A/B test.

Next: Lesson 16 — Meta Ads Metrics & Reporting

- We'll learn CPM, CTR, CPC, CPL, CPA, ROAS, Reach, Impressions, Frequency and how to decide whether a campaign is actually performing well.

- Today we will learn how to read and analyze Meta Ads results. Running a campaign is only the first step. The real skill is understanding whether your ad is performing well or wasting money.

1. Reach

- Reach = The number of unique people who saw your ad.
- Example: If your ad reached 10,000 different people:

→ *Reach = 10,000*

2. Impressions

- Impressions = The total number of times your ad was shown.
- Example: 10,000 people saw your ad, but some people saw it more than once.

→ *Reach = 10,000 Impressions = 15,000*

- Therefore:
- $\text{Reach} \neq \text{Impressions}$

3. Frequency

- Frequency tells you how many times, on average, each person saw your ad.

Formula:

- $\text{Frequency} = \text{Impressions} \div \text{Reach}$
- Example:
- $15,000 \text{ impressions} \div 10,000 \text{ reach} = 1.5 \text{ Frequency}$
- This means the average person saw the ad approximately 1.5 times.

High Frequency

- If frequency keeps increasing while results are declining, it may indicate creative fatigue.

4. CPM

- CPM = Cost Per 1,000 Impressions

- It tells you how much you are paying to show your ad 1,000 times.

Formula:

- $CPM = (\text{Amount Spent} \div \text{Impressions}) \times 1,000$
- Example:
- Spend = ₹500 Impressions = 10,000
- $CPM = ₹50$

→ Cost for 1,000 impressions = ₹50

5. CTR

- CTR = Click-Through Rate
- CTR tells you what percentage of people who saw your ad clicked on it.

Formula:

- $CTR = (\text{Clicks} \div \text{Impressions}) \times 100$
- Example:
- 10,000 impressions 200 clicks
- $CTR = 2\%$

What Does CTR Tell You?

- If your CTR is very low, check:
- Hook
- Creative
- Offer
- Primary Text
- Audience Relevance

6. CPC

- CPC = Cost Per Click
- It tells you the average amount you paid for each click.

Formula:

- $CPC = \text{Amount Spent} \div \text{Link Clicks}$
- Example:
- ₹500 spent 200 link clicks
- $CPC = ₹2.50$

→ Average cost per click = ₹2.50

7. CPL

- CPL = Cost Per Lead
- It tells you how much you are spending to generate one lead.

Formula:

- $CPL = \text{Amount Spent} \div \text{Leads}$
- Example:
- ₹1,000 spent 20 leads
- $CPL = ₹50$

→ Average cost per lead = ₹50

8. CPA

- CPA = Cost Per Acquisition/Action
- It tells you the average cost of getting a desired conversion or action.
- Example:
- ₹5,000 spent 10 purchases
- $CPA = ₹500$

→ Average acquisition cost per purchase = ₹500

- 9. ROAS
- ROAS = Return on Ad Spend
- ROAS is one of the most important metrics for e-commerce and sales campaigns.

Formula:

- $ROAS = \text{Revenue} \div \text{Ad Spend}$
- Example:
- Ad Spend = ₹5,000 Revenue = ₹20,000
- $ROAS = 4x$
- This means:

→ ₹1 spent on ads generated ₹4 in revenue.

10. Conversion Rate

- Conversion Rate tells you what percentage of visitors completed the desired action.
- Example:
 - 1,000 people visited your website. 50 people made a purchase.
 - Conversion Rate:
$$50 \div 1,000 \times 100 = 5\%$$
- Important Metrics
- Metric
 - Meaning
- Reach
 - Number of unique people who saw the ad
- Impressions
 - Total number of times the ad was shown
- Frequency
 - Average number of times a person saw the ad
- CPM
 - Cost per 1,000 impressions
- CTR
 - Percentage of people who clicked
- CPC
 - Cost per click
- CPL
 - Cost per lead
- CPA
 - Cost per conversion/action
- ROAS
 - Revenue generated compared with ad spend

Example: ₹999 Meta Ads Course

- Suppose your campaign data is:
- Ad Spend: ₹3,000 Reach: 20,000 Impressions: 30,000 Clicks: 600 Leads: 60 Purchases: 10 Revenue: ₹9,990
- Now let's calculate:

Frequency

- $30,000 \div 20,000 = 1.5$

CTR

- $600 \div 30,000 \times 100 = 2\%$

CPC

- $\text{₹}3,000 \div 600 = \text{₹}5$

CPL

- $\text{₹}3,000 \div 60 = \text{₹}50$

CPA

- $\text{₹}3,000 \div 10 = \text{₹}300$

ROAS

- $\text{₹}9,990 \div \text{₹}3,000 = 3.33x$
- The Most Important Point
- Never judge a campaign only by its CTR.
- For example:

Campaign A

- CTR = 3% CPL = ₹100 Sales = 2

Campaign B

- CTR = 1.8% CPL = ₹70 Sales = 10

→ Campaign B may be much more valuable for the business, even though its CTR is lower.

- Your final goal should always be the business result.

Simple Diagnostic Formula

- When a campaign is performing poorly, think like this:

Low CTR?

- → Check Creative / Hook / Offer / Audience

High CPC?

- → Check CTR and competition

Good clicks but low leads?

- → Check Landing Page / Form / Offer

Cheap leads but no sales?

- → Check Lead Quality / Targeting / Follow-up

Good sales but low ROAS?

- → Check Product Price / Profit Margin / CPA / Conversion Rate
- Homework
- Analyze the following campaign data:
- Spend: ₹2,000 Impressions: 20,000 Reach: 15,000 Clicks: 400 Leads: 40 Purchases: 5
Revenue: ₹7,500

- Today we will learn what to check, what to change, and when to turn off an ad after launching a campaign.
- Optimization = Making smart changes based on data to improve campaign results.

1. Why Is Campaign Optimization Important?

- Suppose you are running a campaign with a budget of ₹300/day.
- After the first 3 days:
- Spend = ₹900
- Leads = 5
- CPL = ₹180
- If your target CPL is ₹80, continuing the campaign blindly is not a good strategy.
- You need to identify where the problem is:
- Creative → Audience → Landing Page → Offer → Follow-up

2. Basic Optimization Process

- Follow this process for every campaign:
- Launch ↓ Collect Data ↓ Analyze Metrics ↓ Find the Problem ↓ Make One Important Change ↓ Test Again ↓ Scale the Winner

3. What Should You Check First?

- Open your campaign and check these metrics.

Creative Level

- CTR
- CPC
- CPM
- Video Engagement

Lead Campaign

- Leads
- CPL
- Lead Quality

Sales Campaign

- Purchases
- CPA
- ROAS
- Revenue

4. Problem: CTR Is Very Low

- Example:
- $CTR = 0.5\%$
- Your ad is being shown to many people, but very few are clicking.
- This may mean that people are not finding the ad interesting or relevant.

Check:

- Hook
- Image/Video
- Primary Text
- Headline
- Offer
- Audience Relevance

Solution:

- Test a new creative.
- Old Hook: "Learn Meta Ads Online"
- New Hook: "Learn Meta Ads with ₹500/day and Run Your First Campaign"
- The goal is to create a stronger reason for people to stop and click.

5. Problem: CTR Is Good but Leads Are Not Coming

- Suppose:
- $CTR = 2.5\%$ $CPC = ₹4$
- But you are getting very few leads.
- This means people are clicking the ad, but they are not converting after the click.

Check:

- Landing Page
- Form
- Website Speed
- Offer

- CTA
- Trust Signals

Solution:

- Improve the landing page.
- Add:
 - ✓ Testimonials Benefits Clear Pricing FAQ Strong CTA

6. Problem: Leads Are Cheap but Quality Is Poor

- Example:
- CPL = ₹30
- But out of 100 leads, only 2 people are genuinely interested.
- This is not a good campaign.

Check:

- Audience
- Ad Message
- Offer
- Form Questions

Solution:

- Add qualifying questions to your lead form.
- For example:
 - What is your budget?
 - or
 - Why do you want to learn Meta Ads?
- However, don't add too many questions because they can reduce your conversion rate.

7. Problem: Leads Are Good but Sales Are Not Happening

- This does not necessarily mean there is a problem with Meta Ads.
- The problem could be with your follow-up process.
- Example:
 - 100 leads ↓ 20 interested ↓ 0 sales
- Check:
 - How quickly did you contact the leads?
 - How many times did you follow up?
 - Did you clearly explain the offer?

- Did you handle price objections?
- Did you provide enough information to make the purchase decision?

8. When Should You Turn Off an Ad?

- Don't immediately turn off an ad just because it did not produce results during the first few hours.
- First, allow enough data to accumulate.
- However, if:
 - Spend is continuously increasing
 - Results are consistently poor
 - Cost is significantly above your acceptable range
 - The creative is clearly underperforming
- Then you can pause the ad and start a new test.

9. How to Identify a Winning Ad?

- Example:
 - S p e n d
 - e a d s
 - ₹ 9 0 0
 - 6
 - ₹ 9 0 0
 - 5
 - ₹ 9 0 0
 - 3
- If lead quality is similar:
- Ad B = Winner
- However, don't judge only by CPL.
- Also consider:
 - Qualified Leads
 - Sales
 - Revenue
 - ROAS
- The cheapest lead is not always the most valuable lead.

10. Budget Optimization

- Suppose:

- Current Budget = ₹300/day
- Your campaign is performing well.
- You can gradually increase the budget:
- ₹300 → ₹400 → ₹500
- Avoid making very large changes suddenly because it can affect delivery and performance.
- The exact scaling approach should depend on the campaign, objective, stability of results, and available data.

11. Creative Optimization

- Once you find a winning creative, create new variations based on the same successful concept.

Winning Hook:

- "Are you wasting money on Facebook Ads?"
- Now create variations:
- "Not Getting Leads from Meta Ads?"
- "How to Get Better Leads with ₹500/day?"
- "What Is the Biggest Mistake in Your Facebook Ads?"
- This gives you a continuous supply of new creatives to test.

12. Audience Optimization

- Suppose you test two audiences:

Audience A

- CPL = ₹150

Audience B

- CPL = ₹70
- If Audience B is also generating good-quality leads:

→ *Continue testing and consider scaling Audience B.*

- But don't immediately move the entire budget to Audience B. First, collect enough data to confirm that the performance is consistent.

13. Placement Optimization

- Example:
- Placement

- Instagram Reels
- Instagram Feed
- Facebook Feed
- Audience Network
- This is only an example. Actual performance depends on the campaign.
- If, after sufficient data, Audience Network consistently performs poorly, you can test excluding it and compare the results.

14. Golden Rule: One Change at a Time

✗ Don't change all of these at once:

- Audience
- Creative
- Budget
- Placement
- Otherwise, you won't know which change caused the improvement or decline.

Better Approach:

- First:
- Change Creative → Test → Analyze Data
- Then, if necessary:
- Test Audience
- This makes your optimization process much easier to understand.
- Optimization Framework
- When a campaign is underperforming, check in this order:
- 1. Creative ↓
 - CTR / CPC ↓
 - Landing Page / Form ↓
 - Lead Quality ↓
 - Sales / Conversion ↓
 - Budget & Scaling

Practical Example

- Suppose your Meta Ads Course campaign has:
- Budget: ₹300/day
- After sufficient data:
- CTR = 0.7%
- CPC = ₹12

- $CPL = ₹250$
- Lead Quality = Poor

Diagnosis:

- You should review the creative, targeting, and offer.

First Step:

→ *Test a new creative.*

Second Step:

→ *Test the audience and/or offer.*

Third Step:

→ *Improve the lead form to increase lead quality.*

- Homework
- Suppose your campaign data is:
 - Spend = ₹1,500
 - Impressions = 25,000
 - CTR = 0.6%
 - CPC = ₹15
 - Leads = 5
 - CPL = ₹300
 - Sales = 0

Question:

- What would you optimize first and why?

18

Campaign Scaling

- Today we will learn how to get more results from a Meta Ads campaign that is already performing well without damaging its performance.
- Scaling = Increasing the size of a profitable campaign in a controlled and sustainable way.

1. When Should You Scale?

- First, confirm that the campaign is actually performing well.

Example:

- Target CPL = ₹100
- Campaign:
- Spend = ₹3,000
- Leads = 40
- CPL = ₹75
- Lead Quality = Good
- Now you can consider scaling the campaign.
- ✗ Don't start scaling just because you received 2–3 leads.
- You need enough data to confirm that the performance is consistent.

2. Vertical Scaling

- Vertical Scaling = Increasing the budget of the existing campaign or ad set.

Example:

- ₹300/day ↓ ₹400/day ↓ ₹500/day ↓ ₹700/day
- You gradually increase the budget.

Example:

- Current budget = ₹500/day
- You could increase it through controlled increments such as:
- ₹500 → ₹600 → ₹720
- There is no single universal percentage that works for every campaign. The appropriate increase depends on the campaign, objective, delivery, performance stability, and available data.

3. Horizontal Scaling

- Horizontal Scaling = Growing the campaign by testing new audiences, creatives, or ad sets.
- Suppose you have a winning campaign.
- You can test:

Audience 1

- 18–25

Audience 2

- 26–35

Audience 3

- 36–45
- Or test different creative formats:

Creative 1

- Video

Creative 2

- Image

Creative 3

- Testimonial
- This helps you avoid depending entirely on a single ad set or audience.
- 4. Creative Scaling
- One of the most powerful scaling strategies is creating new variations of successful creatives.
- Suppose one video is performing well.
- Create different versions of the same winning concept.

Version 1 — Problem Hook

- "Not Getting Leads from Meta Ads?"

Version 2 — Benefit Hook

- "How to Generate Quality Leads with a Small Budget?"

Version 3 — Question Hook

- "Is Your Meta Ads Strategy Actually Working?"
- One successful concept can generate multiple creative variations.

5. Audience Scaling

- If one audience is performing well, test related audiences.

Current Winner:

- Digital Marketing Interest

Test:

- Entrepreneurship
- Small Business
- Online Advertising
- Business Owners
- Broad Audience
- However, actual interest availability and performance can vary by account, location, and Meta's current targeting options.

6. Broad Targeting

- In many campaigns, instead of adding too many restrictions, you can allow Meta to find relevant users using a broader audience.

Example:

- Location: India Age: 18–40 Gender: All
- Then allow Meta's delivery system to find relevant users.
- Broad targeting can be particularly worth testing in conversion-focused campaigns, depending on the objective and available conversion data.

7. Scaling Through New Placements

- If your creative works well across different formats, Advantage+ Placements can allow Meta to explore more available inventory.

Example:

- Facebook Feed
- Instagram Feed
- Instagram Reels
- Stories
- Monitor the placement breakdown and compare performance rather than assuming one placement will always be best.

8. Scaling Through Remarketing

- You can target both cold audiences and warm audiences.

Example:

- Cold Audience ↓ Website Visitors ↓ Video Viewers ↓ Remarketing ↓ Purchase
- This funnel can help you generate additional conversions from people who have already interacted with your business.

9. Scaling Example

- Suppose:

Current Campaign

- Budget = ₹500/day
- Results:
- 10 leads/day
- CPL = ₹50
- Good Lead Quality

Step 1

- Increase the budget:
- ₹500 → ₹600
- Then monitor performance.

Step 2

- If performance remains stable:
- ₹600 → ₹700

Step 3

- At the same time, test new creative variations.
- This keeps the scaling process controlled.

10. Biggest Scaling Mistake

- ✗ Increasing the Budget Too Aggressively
- Example:
- ₹500/day → ₹5,000/day
- Such a large increase can significantly change delivery and may hurt performance.
- Therefore, controlled scaling is generally a safer approach.

11. When Should You Stop Scaling?

- If increasing the budget causes:
 - CPL to increase significantly
 - CPA to increase significantly
 - ROAS to decline
 - Lead quality to decrease
 - Conversion rate to decrease
- Then stop increasing the budget and analyze the campaign.
- Don't keep scaling simply because the campaign was previously profitable.

12. What Should You Monitor During Scaling?

- After every meaningful budget increase, monitor the following.

Lead Campaign

- Leads
- CPL
- CTR
- CPC
- Lead Quality

Sales Campaign

- Purchases
- CPA
- Revenue
- ROAS
- Conversion Rate
- Professional Scaling Formula
- Remember:
 - Winning Campaign ↓ Increase Budget Carefully + New Creatives + New Audiences + Remarketing ↓ More Conversions
- Scaling does not simply mean increasing the budget.

Scaling = Budget + Creative + Audience + Data

- Practical Exercise
- Your campaign currently has:
 - Budget = ₹300/day Leads = 8/day
 - CPL = ₹37.50 Lead Quality = Good

What should you do?

Possible Strategy:

- Step 1: Give the campaign enough time and data to confirm consistent performance.
- Step 2: Increase the budget in a controlled manner.
- Step 3: Create 2–3 variations of the winning creative.
- Step 4: Test a new audience.
- Step 5: Monitor CPL and lead quality.
- Homework
- Suppose:
 - Current Budget: ₹500/day CPL: ₹80 Target CPL: ₹100 Leads: Good Quality
- Answer these questions:
 - Would you scale the campaign?
 - How much would you increase the budget?
 - How would you use creative scaling?
 - Which metrics would you monitor?
 - What would make you stop scaling?

- Today we'll learn an important topic: why Meta Ads get rejected and how to create policy-compliant ads.
- Goal: Understand Meta's policies so you can avoid unnecessary ad rejection and account restrictions.

1. What is Meta Ad Review?

- When you publish an ad, Meta reviews it against its advertising policies.
- Meta may review:
 - Ad image/video
 - Primary text
 - Headline
 - Landing page
 - Offer
 - Targeting
 - Destination URL

2. Why Do Meta Ads Get Rejected?

- Common reasons include:
 - Misleading claims
 - Personal attributes
 - Unrealistic results
 - Prohibited products/services
 - Restricted categories
 - Poor landing-page experience
 - Inconsistent information
- 3. Misleading Claims
 - Don't make claims that you cannot prove.
 - ✗ Risky
 - "100% Guaranteed Sales"
 - ✓ Better
 - "Learn strategies to improve your Meta Ads performance."
 - Your ad should accurately represent what you're offering.

- 4. Personal Attributes Policy
- This is extremely important.
- Don't directly call out someone's personal characteristics or circumstances.
- ✗ Risky
- "Are you poor?"
- "Are you struggling with debt?"
- "Are you overweight?"
- These statements directly reference personal circumstances.
- ✓ Better
- "Explore financial solutions for eligible applicants."
- Keep the message general rather than assuming something about the person viewing the ad.

5. Before & After Images

- Before-and-after advertising can be sensitive, especially in:
- Health
- Fitness
- Weight loss
- Beauty
- ✗ Risky
- Showing a dramatic "before" and "after" transformation with unrealistic promises.
- ✓ Better
- Show the product or service clearly and avoid exaggerated transformation claims.
- 6. Financial Ads
- This is especially important for advertisers working with:
- Personal loans
- Home loans
- Business loans
- Credit
- Insurance
- Investment products
- Financial services can have additional advertising requirements and restrictions.
- ✗ Risky
- "Guaranteed ₹10 lakh loan for everyone!"
- "Bad credit? Guaranteed approval!"
- "Everyone gets instant approval!"
- These can be misleading.
- ✓ Better

- "Explore available loan options for eligible applicants. Terms and eligibility apply."
- Make sure your actual fees, rates, eligibility requirements, and conditions are accurately represented.

7. Misleading Landing Pages

- Your ad and landing page should provide consistent information.
- ✗ Example
 - Ad says:
 - Meta Ads Course – ₹999
 - Landing page says:
 - ₹2,999
 - This creates an inconsistent and potentially misleading experience.
- ✓ Better
 - Keep:
 - Price
 - Offer
 - Product
 - Terms
 - CTA
 - consistent between the ad and landing page.

8. Clickbait

- ✗ Risky
 - "You WON'T BELIEVE what happens next!!!"
 - If the landing page doesn't deliver what the ad promises, users may have a poor experience.
- ✓ Better
 - Use a clear and accurate message:
 - "5 Meta Ads mistakes that can increase your advertising costs."

9. Unrealistic Income Claims

- This is particularly important for:
 - Digital marketing courses
 - Business courses
 - Investment offers
 - Coaching
- ✗ Risky

- "Learn Meta Ads and earn ₹1 lakh every month GUARANTEED!"
- ✓ Better
- "Learn Meta Ads skills for running campaigns for your own business or clients."
- Don't guarantee financial results that depend on individual circumstances.

10. Prohibited vs Restricted

- There is an important difference.

Prohibited

- Certain products, services, or practices aren't allowed to be advertised.

Restricted

- Some categories may be allowed but have additional requirements or limitations.
- Always check the current Meta policy for sensitive categories before launching campaigns.

11. What to Do When Your Ad Is Rejected

Step 1

- Open Ads Manager.

Step 2

- Check the rejection reason.

Step 3

- Identify the policy issue.

Step 4

- Edit the:
 - Creative
 - Copy
 - Offer
 - Landing page
 - as appropriate.

Step 5

- If you believe the rejection was incorrect, use Request Review when that option is available.

12. Don't Repeatedly Duplicate Rejected Ads

- If an ad is rejected:
 - ✗ Don't keep duplicating the same ad.
- Instead:
- Understand the rejection.
- Fix the underlying issue.
- Submit the corrected version.
- Repeated policy violations can create account problems.

13. Meta Ads Policy Checklist

- Before publishing, check:

Creative

- Is the image/video accurate?
- Are there exaggerated transformations?

Copy

- Am I making guaranteed claims?
- Am I making unrealistic promises?
- Am I referencing someone's personal attributes?

Offer

- Is the price accurate?
- Are important terms clear?

Landing Page

- Does it match the ad?
- Does it work properly?

Industry

- Is this a financial, health, employment, or other restricted category?
- Practical Example
 - ✗ Ad
 - "Learn Meta Ads and earn ₹1 lakh every month guaranteed!"

Problem:

- It makes a guaranteed income claim.
- ✓ Better Ad

- "Learn Facebook & Instagram Ads through practical training and real campaign examples."
- This focuses on the actual educational service rather than guaranteeing an income.
- Homework
- Identify the problem with each ad:

Ad A

- "Guaranteed ₹10 lakh loan for everyone!"

Ad B

- "Learn Meta Ads with practical campaign training."

Ad C

- "Are you poor and struggling financially?"

Ad D

- "Learn Meta Ads and earn ₹1 lakh every month guaranteed."
- For each one, decide:
- Safe / Risky — and explain why.

LESSON 20 PREVIEW

Complete Meta Ads Campaign Creation

- You'll learn how to create a complete campaign from:
- Campaign → Ad Set → Ad
- including:
- Campaign objective
- Budget
- Audience
- Placements
- Creative
- Primary text
- Headline
- CTA
- Tracking
- Publishing
- Checking results

- Today we'll combine everything you've learned so far and create a complete Meta Ads campaign from start to finish.
- Think of Meta Ads Manager as having 3 levels:
- CAMPAIGN

↓

- AD SET

↓

- AD

1. Campaign Level

- The Campaign level answers:
- "What is my advertising goal?"
- For example:
- Awareness
- Traffic
- Engagement
- Leads
- Sales
- App promotion

Example

- You want to sell your ₹999 Meta Ads Course.
- Choose:
- Objective → Leads
- If your goal is website purchases, choose the objective appropriate for sales/conversions.

2. Name Your Campaign

- Use a professional naming system.
- Example:
- META COURSE | LEADS | INDIA | AUG 2026
- A good naming structure makes reporting easier later.

3. Campaign Settings

- At the Campaign level, you'll see settings such as:
- Buying type
- Objective
- Campaign budget settings
- A/B test options
- Special Ad Categories, when applicable
- For our practice campaign:
- Objective: Leads

4. Ad Set Level

- The Ad Set answers:
- "Who should see my ad, where should they see it, and how should Meta optimize delivery?"
- This is where you'll configure:
- Conversion location
- Audience
- Budget
- Schedule
- Placements
- Optimization settings

5. Conversion Location

- For a lead campaign, you may choose options such as:

Instant Forms

- User submits the form directly inside Facebook/Instagram.

Website

- User goes to your website and submits a form.

Messaging

- User starts a conversation through an available messaging destination.
- Choose based on your business process and where you can follow up effectively.

6. Audience

- Example for our course:

Location

- India

Age

- 18–40

Gender

- All

Detailed Targeting

- You can test relevant interests such as:
- Digital Marketing
- Entrepreneurship
- Small Business
- You can also test broad targeting depending on the campaign and available Meta options.

7. Budget

- For our practice campaign:
- ₹300/day
- Remember:
- Budget is not the same as guaranteed results.
- Your actual performance depends on:
- Audience
- Creative
- Offer
- Competition
- Campaign objective
- Conversion experience

8. Schedule

- You can choose:

Start Date

- Example:
- 12 August 2026
- For a normal ongoing campaign, you can leave the end date open.
- For a limited-time promotion, set an appropriate end date.

9. Placements

- For beginners:

Advantage+ Placements

- This allows Meta to distribute ads across eligible placements based on predicted performance.
- If you have a specific reason to control placements, you can test Manual Placements.

10. Ad Level

- The Ad level answers:
- "What exactly will people see?"
- Here you'll configure:
- Identity
- Creative
- Primary Text
- Headline
- Description where applicable
- CTA
- Destination

11. Select Your Facebook Page & Instagram Account

- Choose the business identity that should appear on the ad.
- Example:
- Facebook Page: Shubh Marketing
- Instagram Account: Your business Instagram account
- Make sure you have the appropriate access to these assets.

12. Choose Your Creative

- For our Meta Ads Course:

Creative Type

- Single Image
- or
- Video
- Example image:
- 1080 × 1080 px

- For vertical placements such as Stories/Reels:
- 1080 × 1920 px

13. Primary Text

- Example:
- Want to learn Facebook & Instagram Ads from scratch?
- Learn campaign setup, audience targeting, creative strategy, lead generation, tracking and optimization through practical training.
- Start building real Meta Ads skills today.

14. Headline

- Keep it short and clear.

Example:

- Master Meta Ads from Scratch

15. CTA

- Choose a CTA that matches the action you want.
- Examples:
- Learn More
- Sign Up
- Contact Us
- Send WhatsApp Message
- Shop Now
- For our course:
- Sign Up

16. Lead Form

- If using Instant Forms, create a simple form.

Example:

- Form Name:
- Meta Ads Course Registration

Questions:

- Full Name

- Phone Number
- Email
- You can add a relevant qualifying question if needed.
- Don't ask unnecessary questions.

17. Thank You Screen

- After submission:
- Thank you! Our team will contact you shortly with the course details.
- You can provide an appropriate next step, such as visiting your website or contacting your business.

18. Tracking

- Before launching, make sure your tracking is appropriate for your campaign.
- For website campaigns, this may include:
 - Meta Pixel
 - Conversion events
 - Website event tracking
- For Instant Forms, monitor the leads inside Meta and connect your follow-up process.

19. Preview Your Ad

- Before publishing, check how your ad looks across placements.
- Check:
 - ✓ Text isn't cut off
 - ✓ Image/video looks good
 - ✓ CTA is correct
 - ✓ Landing page works
 - ✓ Form works
 - ✓ Offer and price are accurate

20. Publish

- Once everything is ready:
- Click → Publish
- Your ad will enter Meta's review process.
- Don't assume it will immediately start delivering.

21. After Publishing

- Don't immediately start changing everything.
- First monitor:
- Spend
- Reach
- Impressions
- CTR
- CPC
- Leads
- CPL
- Lead quality
- For sales campaigns:
- Purchases
- CPA
- Revenue
- ROAS

COMPLETE EXAMPLE

Campaign

- Name: META COURSE | LEADS | INDIA | AUG 2026
- Objective: Leads

Ad Set

- Conversion Location: Instant Form
- Location: India
- Age: 18–40
- Gender: All
- Budget: ₹300/day
- Placements: Advantage+ Placements

Ad

- Format: Single Image
- Primary Text:

- Want to learn Facebook & Instagram Ads from scratch?
- Learn campaign setup, audience targeting, creative strategy, lead generation and optimization through practical training.
- Start learning Meta Ads today.
- Headline:
- Master Meta Ads from Scratch
- CTA:
- Sign Up

Remember the 3-Level Structure

- This is extremely important:

CAMPAIGN

- What is your goal?

↓

AD SET

- Who, where, budget and optimization?

↓

AD

- What will people see?
- If you understand these three levels, you understand the basic structure of Meta Ads Manager.
- Lesson 20 Practical Assignment
- Create a draft campaign for your ₹999 Meta Ads Course.
- Fill this:
- Campaign: Objective = _____
- Ad Set: Conversion Location = _____ Location = _____ Age = _____ Budget = _____ Placements = _____
- Ad: Creative = _____ Primary Text = _____ Headline = _____ CTA = _____

LESSON 21 PREVIEW

Meta Ads Manager Practical Dashboard

- Next we'll learn how to actually read the Ads Manager dashboard:
- Campaign vs Ad Set vs Ad
- Amount Spent
- Results

- Cost per Result
- CPM
- CTR
- CPC
- Frequency
- Breakdown
- Date ranges
- Exporting reports
- Finding the winning ad

- Today you'll learn how to read your campaign data like a professional Meta Ads manager.
- Launching an ad is only half the job. The real skill is understanding the numbers and making decisions from them.

1. Open Ads Manager

- Go to Meta Ads Manager and you'll see three main levels:
- Campaign
 - ↓
- Ad Set
 - ↓
- Ad

Campaign

- Shows the overall campaign performance.

Ad Set

- Shows audience, placement, budget and optimization performance.

Ad

- Shows individual creative performance.

2. Main Dashboard Columns

- You'll commonly see metrics such as:
- Delivery
- Results
- Reach
- Impressions
- Cost per Result
- Amount Spent
- CPM
- CTR
- CPC
- Frequency

- The exact columns available can vary based on your campaign objective and account setup.

3. Delivery

- Delivery tells you the current status of your campaign.
- Examples:
 - Active → Campaign is running.
 - ⏸ Paused → Campaign is stopped.
 - In Review → Meta is reviewing the ad.
 - Rejected → Ad has been rejected.
- You should always check Delivery before trying to diagnose performance.

4. Results

- Results tells you how many desired actions your campaign generated.
- For a Lead campaign:
 - Results = Leads
- For a Sales campaign:
 - Results = Purchases
- For a Traffic campaign:
 - Results = Link Clicks or another selected result.
- Always check what the campaign is actually optimizing for.
- 5. Cost Per Result
 - This is one of the most important columns.
 - Example:
 - Spend = ₹1,000
 - Leads = 20
 - Cost per Result:
 - $₹1,000 \div 20 = ₹50$
 - So:

→ *Cost per Lead = ₹50*

6. Amount Spent

- This tells you how much money the campaign has actually spent during the selected date range.
- Example:
 - Daily budget = ₹300

- Amount spent after 3 days $\approx$ ₹900
- The exact spend can vary depending on Meta's delivery and budget settings.

7. Reach

- Reach = Number of unique people who saw your ad.
- Example:
- Reach = 25,000
- That means approximately 25,000 different people saw your ad.

8. Impressions

- Impressions = Total number of times your ad was displayed.
- Example:
- Reach = 25,000
- Impressions = 40,000
- Some people saw the ad more than once.

9. Frequency

- Formula:
- $\text{Frequency} = \text{Impressions} \div \text{Reach}$
- Example:
- $40,000 \div 25,000$
- $= 1.6$
- Average person saw your ad about 1.6 times.
- If frequency rises significantly while results decline, consider whether your audience or creative is becoming fatigued.

10. CPM

- CPM = Cost per 1,000 impressions
- Example:
- Spend = ₹1,000
- Impressions = 20,000
- CPM:
- $\text{₹}1,000 \div 20,000 \times 1,000 = \text{₹}50$
- So CPM = ₹50

11. CTR

- CTR = Click-Through Rate
- It shows the percentage of impressions that resulted in the relevant click metric.
- Example:
- 20,000 impressions
- 400 link clicks
- CTR:
- $400 \div 20,000 \times 100 = 2\%$

12. CPC

- CPC = Cost Per Click
- Example:
- ₹1,000 spent
- 400 link clicks
- CPC:
- $₹1,000 \div 400 = ₹2.50$

13. How to Read the Funnel

- Think about your campaign like this:
- Impressions
- ↓
- Clicks
- ↓
- Landing Page
- ↓
- Leads
- ↓
- Qualified Leads
- ↓
- Sales
- If something goes wrong, identify where the drop happens.

14. Example Analysis

- Suppose:
- Spend = ₹2,000

- Impressions = 40,000
- Link Clicks = 800
- Leads = 40
- Sales = 5

CTR

- $800 \div 40,000 \times 100$
- = 2%

CPC

- $\text{₹}2,000 \div 800$
- = ₹2.50

CPL

- $\text{₹}2,000 \div 40$
- = ₹50

CPA

- $\text{₹}2,000 \div 5$
- = ₹400
- Now you can evaluate each stage separately.

15. Campaign vs Ad Set vs Ad

- This is extremely important.

Campaign Level

- Ask:
- Is my overall campaign working?

Ad Set Level

- Ask:
- Which audience/placement is working?

Ad Level

- Ask:
- Which creative is working?
- Example:
- Campaign
- |

- | — Ad Set A
- | | — Ad 1
- | | — Ad 2
- |
- | — Ad Set B
- | — Ad 3
- | — Ad 4
- You can drill down from Campaign → Ad Set → Ad.

16. Date Range

- Always check the date range before analyzing data.
- Examples:
 - Today
 - Yesterday
 - Last 7 Days
 - Last 14 Days
 - Last 30 Days
 - Lifetime

Beginner Tip

- Use a consistent date range when comparing performance.
- Don't compare:
 - Ad A → 30 days
 - with:
 - Ad B → 2 days
- That's not a fair comparison.

17. Breakdown

- The Breakdown feature lets you analyze performance by different dimensions.
- Depending on the campaign, useful breakdowns can include:
 - Age
 - Gender
 - Placement
 - Platform
 - Country/Region
- Example:

- You discover:
- Instagram Reels → ₹60 CPL
- Facebook Feed → ₹110 CPL
- This gives you additional insight into where results are coming from.

18. Customizing Columns

- You don't need every metric on your dashboard.
- Create a useful column view.

Lead Campaign

- I recommend tracking:
- Results
- Cost per Result
- Amount Spent
- Reach
- Impressions
- Frequency
- CPM
- CTR
- CPC
- And then add business-quality metrics outside Meta when available:
- Qualified Leads
- Sales
- Revenue

19. Exporting Reports

- For professional client work, you may need to export campaign data.
- You can use the reporting/export options in Ads Manager to analyze performance in spreadsheets.
- This is useful for:
- Client reports
- Monthly reports
- Campaign comparisons
- Budget tracking

Professional Analysis Method

- Don't ask only:
- "How many leads did I get?"
- Ask:

Step 1

- How much did I spend?

Step 2

- How many people did I reach?

Step 3

- How many clicked?

Step 4

- How many became leads?

Step 5

- How many leads were qualified?

Step 6

- How many became customers?

Step 7

- How much revenue was generated?

Practical Example

- Your campaign:
- Met ric
 - R e s u l t
- Spe nd
 - ₹ 3 , 0 0 0
- Rea ch
 - 3 0 , 0 0 0
- Impr essi ons
 - 4 5 , 0 0 0
- Clic ks
 - 9 0 0

- Leads
 - 60
- Sales
 - 10
- Revenue
 - ₹9,990
- Calculate:

Frequency

- $45,000 \div 30,000 = 1.5$

CTR

- $900 \div 45,000 \times 100 = 2\%$

CPC

- $₹3,000 \div 900 = ₹3.33$

CPL

- $₹3,000 \div 60 = ₹50$

CPA

- $₹3,000 \div 10 = ₹300$

ROAS

- $₹9,990 \div ₹3,000 = 3.33x$
- Homework
- Open your Ads Manager and identify these columns:
- Results
- Cost per Result
- Amount Spent
- Reach
- Impressions
- Frequency
- CPM
- CTR
- CPC
- Then answer:
- If you spend ₹2,000 and generate 40 leads, what is your CPL?

- Today we'll learn how to identify problems in a Meta Ads campaign and fix them step by step.
- Don't change everything at once. First identify the problem, then make one logical change and test again.

1. Problem: Ad Is Not Spending

Symptoms

- Amount Spent = ₹0
- No impressions
- No results

Check:

- ✓ Is the ad approved? Is the campaign/ad set active? Is the start date correct? Is the payment method working? Is the audience too restrictive? Are there account restrictions?

Action

- First check the Delivery column and Meta's notification/rejection message.

2. Problem: High CPM

- Example:
- Your CPM is much higher than expected.

Possible reasons:

- High competition
- Small audience
- Weak ad relevance
- Limited placements
- Seasonal demand

Try:

- ✓ Test a broader audience Test new creatives Consider Advantage+ Placements Review your offer and creative
- Don't judge CPM alone—look at your actual cost per result.

3. Problem: Low CTR

- Example:
- Your ad gets many impressions but very few clicks.

Possible reasons:

- Weak hook
- Uninteresting creative
- Wrong audience
- Poor offer
- Unclear CTA

Fix:

- Create a new creative.
- Example:

Old Hook:

- Learn Digital Marketing

New Hook:

- Getting clicks but no leads from Meta Ads?
- The second version creates a specific problem that your audience may recognize.

4. Problem: High CPC

- High CPC can be connected to low CTR or expensive auction conditions.

Check:

- CTR + CPM + Creative
- For example:
- If CPM is high and CTR is low, your click can become expensive.

Try:

- Better hook
- Better creative
- Different audience
- Additional placement testing

5. Problem: Good CTR but No Leads

- This is very common.

- Example:
- CTR = 2.5%
- CPC = ₹3
- Lots of clicks
- Very few leads
- People are interested enough to click, but something after the click is stopping them.

Check:

- Landing page
- Page speed
- Form
- Offer
- CTA
- Trust signals
- Price
- Mobile experience

6. Problem: Leads Are Too Expensive

- Example:
- Target CPL = ₹100
- Actual CPL = ₹250
- Don't immediately increase the budget.
- First check:

Creative

- Is the ad attracting the right people?

Audience

- Is your targeting too narrow or poorly matched?

Offer

- Is there a compelling reason to submit?

Form

- Are you asking too many questions?

7. Problem: Cheap Leads but Poor Quality

- This is one of the biggest mistakes beginners make.

- Example:
- $CPL = ₹30$
- Sounds great.
- But:
- 100 leads → 2 genuine prospects.
- That's not necessarily a successful campaign.

Fix:

- Improve:
- Audience
- Ad messaging
- Offer
- Lead form
- Qualification questions
- Follow-up process
- Your goal is qualified leads, not simply cheap leads.

8. Problem: Good Leads but No Sales

- If your leads are genuinely interested but aren't purchasing, the issue may be outside the ad.
- Check:
- Response time
- Sales calls
- WhatsApp follow-up
- Pricing
- Offer
- Sales pitch
- Payment process

Example:

- 100 leads 30 qualified 20 contacted 10 interested 0 purchases
- Here, you should investigate the sales/conversion process, not automatically blame the ad.

9. Problem: Campaign Was Good, Then Performance Dropped

- Example:
- Week 1:
- $CPL = ₹60$
- Week 2:

- $CPL = ₹140$
- Possible reasons:
- Creative fatigue
- Audience saturation
- Increased competition
- Offer becoming less attractive
- Conversion rate dropping

Check:

- Frequency + CTR + CPM + CPL
- If frequency is rising while CTR falls, test fresh creatives.

10. Problem: Ad Fatigue

- People repeatedly see the same ad.
- Example:
- Frequency keeps increasing.
- At the same time:
- CTR decreases
- CPC increases
- CPL increases

Solution:

- Create fresh versions:
- New video
- New hook
- New thumbnail
- New primary text
- New angle

11. Problem: Website Gets Traffic but No Sales

- Your ad is generating visitors.
- But:
- 1000 Visitors
- ↓
- 0 Purchases
- Check:

Website

- Is it fast?
- Is it mobile-friendly?
- Is the offer clear?
- Is the CTA visible?

Checkout

- Is payment working?
- Are there unnecessary steps?
- Is the price clearly displayed?

Tracking

- Is the Purchase event firing correctly?

12. Problem: Meta Pixel Isn't Tracking Correctly

- Possible signs:
- Purchases aren't showing
- Leads are missing
- Events aren't firing
- Data looks inconsistent

Check:

- Pixel installation
- Event configuration
- Event Manager
- Browser/server tracking setup where applicable
- Duplicate events 
- Website changes
- Always test your tracking before making major optimization decisions.

13. The Troubleshooting Framework

- Use this simple framework:
- NO DELIVERY
↓
- Check Campaign / Account / Payment / Policy
↓
- NO CLICKS

↓

- Check Creative / Audience / Offer

↓

- CLICKS BUT NO LEADS

↓

- Check Landing Page / Form / Offer

↓

- LEADS BUT NO SALES

↓

- Check Lead Quality / Follow-up / Sales Process

↓

- SALES BUT LOW PROFIT

↓

- Check CPA / ROAS / Product Margin

14. Don't Make These Mistakes

- ✗ Changing five things simultaneously.
- ✗ Pausing an ad after only a few hours without enough data.
- ✗ Looking only at CTR.
- ✗ Looking only at cheap CPL.
- ✗ Increasing budget on a campaign that isn't profitable.
- ✗ Blaming Meta when the problem is the landing page or sales process.
- Real Example
- Your campaign data:
 - Spend = ₹2,000
 - Impressions = 25,000
 - CTR = 2.4%
 - CPC = ₹3.33
 - Leads = 10
 - CPL = ₹200

Analysis:

- CTR is reasonably strong → people are interested enough to click.
- CPC is manageable → clicks aren't necessarily the main problem.
- But CPL is high → there may be a problem after the click.

First things to investigate:

- Landing page
- Lead form
- Offer
- Conversion experience
- Don't immediately change the audience.
- Homework
- You have this campaign:
- Spend: ₹1,500
- Impressions: 30,000
- CTR: 0.5%
- CPC: ₹10
- Leads: 3
- CPL: ₹500

Question:

- What would you check first?
- Think about:
- Creative → Audience → Landing Page → Form → Follow-up

- Today we'll learn how to use Meta Ads to sell products online.
- Goal: Understand the complete journey from showing a product ad to generating a purchase.

1. What is an E-commerce Ad?

- An e-commerce ad promotes a product and sends the user toward a purchase.
- Example:
 - Instagram Ad
 - ↓
 - Product Page
 - ↓
 - Add to Cart
 - ↓
 - Checkout
 - ↓
 - Payment
 - ↓
 - Purchase

2. Example

- Suppose you sell:
 - Men's T-Shirts – ₹799
 - You create a Meta Sales campaign.
 - Your ad could show:
 - Product image/video Price Offer Shop Now
 - When someone clicks:
 - Ad → Website → Product → Checkout → Purchase

3. Which Objective?

- For website product sales, generally use:

Sales Objective

- The campaign can be optimized toward conversion events such as:
- Add to Cart
- Initiate Checkout
- Purchase
- For a mature e-commerce setup, Purchase is usually the key event you want Meta to optimize toward.
- 4. Meta Pixel & Purchase Event
- For website sales, tracking is extremely important.
- You should have:
- Meta Pixel / dataset
- and appropriate events such as:
- PageView
- ↓
- ViewContent
- ↓
- AddToCart
- ↓
- InitiateCheckout
- ↓
- Purchase
- The Purchase event tells Meta that an actual sale happened.

5. Why Purchase Tracking Matters

- Suppose you spend:
- ₹5,000
- Without proper purchase tracking, Meta may know people clicked your ad but have limited information about which users actually purchased.
- With reliable purchase tracking, Meta gets conversion signals that can help optimize delivery.

6. Product Catalog

- A Meta Catalog is a structured collection of your products.
- It can contain:
- Product name
- Product image
- Price

- Description
- Product URL
- Availability
- Example:
- T-Shirt
- ₹799
- Image
- Website Link
- Jeans
- ₹1,499
- Image
- Website Link
- Shoes
- ₹2,499
- Image
- Website Link

7. Why Catalogs Are Useful

- Catalogs are especially useful when you have many products.
- Instead of manually creating an ad for every product, Meta can use your product information dynamically.

8. Dynamic Product Ads

- Dynamic ads can show people products based on their interactions with your website or catalog.
- Example:
- A customer visits:
- Black T-Shirt
- but doesn't buy.
- Later, they may see an ad featuring that product.
- This is a powerful remarketing strategy.

9. E-commerce Funnel

- A typical funnel looks like:
- Cold Audience

↓

- Product Ad

↓

- Website Visitor

↓

- View Product

↓

- Add to Cart

↓

- Checkout

↓

- Purchase

- Not everyone will move to the next step.
- Your job is to identify where the biggest drop-off happens.

10. Add to Cart

- AddToCart means someone added your product to their shopping cart.
- Example:
- Product price = ₹799
- User clicks:
- Add to Cart
- Meta records an AddToCart event if tracking is configured correctly.

11. Initiate Checkout

- This means the customer started the checkout process.
- Example:
- Product
- ↓
- Add to Cart
- ↓
- Checkout Started
- ↓
- Payment
- If many people reach checkout but few complete payment, investigate your checkout experience.

12. Purchase

- This is the most important event for a sales campaign.
- Example:
- 100 people visit product page.
- 20 add to cart.
- 10 start checkout.
- 4 purchase.
- Your goal is to improve this funnel.

13. ROAS

- $ROAS = \text{Revenue} \div \text{Ad Spend}$
- Example:
- Ad Spend = ₹10,000
- Revenue = ₹40,000
- ROAS:
- $₹40,000 \div ₹10,000 = 4x$
- Meaning:
- Every ₹1 spent generated ₹4 in tracked revenue.
- But remember: ROAS is not the same as profit.

14. ROAS vs Profit

- Example:
- Product selling price = ₹1,000
- Product + shipping + payment + other costs = ₹700
- Ad cost per sale = ₹200
- Profit:
- $₹1,000 - ₹700 - ₹200$
- = ₹100
- So even if the campaign has revenue, you need to calculate actual business profitability.

15. Retargeting E-commerce Visitors

- You can create audiences from people who:
- Viewed products
- Added to cart
- Started checkout

- Visited your website
- Then show them relevant ads.
- Example:
- "Still thinking about it? Complete your order today."
- Only use genuine offers or urgency.

16. Exclude Purchasers

- If someone already purchased a product, you may not want to keep showing them the exact same acquisition ad.
- Instead:

Existing Customer

- Show:
- New products
- Cross-sell
- Upsell
- Repeat purchase offers

17. Creative Strategy for E-commerce

- Different products need different creative angles.

Product Demonstration

- Show the product in use.

Problem → Solution

- Show a problem and explain how your product solves it.

Testimonial

- Show genuine customer feedback.

Offer

- Highlight a genuine discount or promotion.

UGC

- Use authentic user-generated content when you have permission to use it.

18. Example: Clothing Brand

- Product:

- Men's T-Shirt – ₹799

Creative:

- Video showing:
- Front
- Back
- Fabric
- Fit
- Different colors

Primary Text:

- Upgrade your everyday style with comfortable, versatile T-shirts. Explore the latest collection and shop online.

Headline:

- Shop Men's T-Shirts

CTA:

- Shop Now

19. Important E-commerce Metrics

- Monitor:
- CPM
- CTR
- CPC
- Add to Cart
- Cost per Add to Cart
- Initiate Checkout
- Purchases
- Cost per Purchase
- Conversion Rate
- ROAS
- Revenue

20. How to Find the Problem

Many Impressions, Few Clicks

→ Check creative.

Many Clicks, Few Product Views

→ Check website speed/page experience.

Many Product Views, Few Add to Carts

→ Check product, price, images and offer.

Many Add to Carts, Few Purchases

→ Check checkout, shipping, payment and trust.

Purchases but Low Profit

→ Check product margin and acquisition cost.

Complete E-commerce Example

Product

- T-Shirt = ₹799

Campaign

- Objective: Sales

Budget

- ₹500/day

Audience

- India

Creative

- Product video

CTA

- Shop Now

Tracking

- ViewContent
- AddToCart
- InitiateCheckout
- Purchase

Result

- Spend = ₹5,000 Revenue = ₹20,000
- ROAS:
- $₹20,000 \div ₹5,000 = 4x$

Practical Assignment

- Imagine you're running ads for a clothing store.
- Create:

Campaign

- Objective = _____

Product

Budget

- ₹_____ /day

Creative

CTA

Purchase Tracking

- Then write your expected customer journey:
- Ad → _____ → _____ → _____ → Purchase

Remember

- For e-commerce:
- Don't optimize only for clicks.
- The real journey is:
- Click → Product View → Add to Cart → Checkout → Purchase → Profit

- Today we'll learn how to use Meta Ads to generate local customers, WhatsApp enquiries, calls, bookings, and leads.
- Examples of local businesses:
 - Clinics
 - Salons
 - Gyms
 - Restaurants
 - Coaching Institutes
 - Real Estate
 - Clothing Stores
 - Dental Clinics
 - Hotels

1. What Is Local Business Advertising?

- Local advertising means showing your ads to people in a specific geographic area around your business.
- Example:
 - A salon is located in Lucknow.
 - Instead of advertising to all of India, you may target relevant people in the areas the salon actually serves.
- Business Location
 - ↓
- Local Audience
 - ↓
- Meta Ad
 - ↓
- WhatsApp / Call / Form
 - ↓
- Appointment
 - ↓
- Customer

2. Choose the Right Campaign Objective

- Your objective depends on the actual business goal.

If you want WhatsApp enquiries

- Use a messaging-focused setup where available.

If you want lead forms

- Use:
- Leads

If you want website bookings

- Use the objective and conversion setup appropriate for your booking funnel.

If you want local awareness

- Use an awareness-focused campaign.
- Don't choose an objective just because it sounds popular. Choose the objective that matches the business outcome you want.
- 3. Geographic Targeting
- This is one of the most important parts of local advertising.
- Example:
- A dental clinic in Lucknow may target:
- Lucknow + surrounding service area
- rather than the entire country.
- Depending on the business, you can test:
- City
- Specific areas
- Radius-based local targeting where available

4. Don't Target Too Large an Area

- Suppose your salon only serves customers within approximately 10–15 km.
- Advertising across all of Uttar Pradesh could waste budget.
- Your targeting should match the real service area.

5. Example: Local Salon Campaign

Business

- Premium Salon

Location

- Lucknow

Objective

- Leads / Messaging

Offer

- Haircut + Hair Spa offer

CTA

- Send Message

6. Local Ad Creative

- Local ads should quickly answer:

What?

- What are you offering?

Where?

- Where is the business located?

Why?

- Why should someone choose you?

Action?

- What should they do next?

7. Example Creative

Headline:

- Premium Salon in Lucknow

Primary Text:

- Looking for a professional salon near you?
- Explore our hair, beauty and grooming services and book your appointment today.
- Lucknow Message us for availability.

CTA:

- Send Message
- 8. WhatsApp Lead Generation

- For many local businesses, WhatsApp can be an effective enquiry channel.
- Example:
- Meta Ad
- ↓
- WhatsApp
- ↓
- Customer Enquiry
- ↓
- Business Reply
- ↓
- Appointment

9. WhatsApp Message Flow

- Don't just say:
- "Hi"
- Create a useful starting message.
- Example:
- "Hi, I saw your ad and would like to know about your salon offers."
- Then the business can ask:
- Which service do you need?
- Preferred date?
- Preferred time?
- Location?
- Keep the conversation simple.

10. Local Lead Form

- For a local business, your form might ask:
- Name
- Phone Number
- Service Required
- Preferred Area
- Preferred Appointment Time
- Don't ask unnecessary questions.
- The more complicated the form, the more friction you may create.

11. Local Offers

- Offers can increase response rates.
- Examples:

Salon

- Haircut + Hair Spa at ₹999

Gym

- 7-Day Trial

Coaching

- Free Counselling Session

Restaurant

- Weekend Special Offer

Clinic

- Book a Consultation
- Make sure the offer is genuine and the terms are clear.

12. Local Business Creative Ideas

Idea 1: Location Hook

- "Looking for a premium salon in Lucknow?"

Idea 2: Problem Hook

- "Still searching for a reliable gym near you?"

Idea 3: Offer Hook

- "Try our 7-day gym trial."

Idea 4: Social Proof

- "Trusted by hundreds of local customers."
- Only use claims that are accurate and supportable.

13. Local Retargeting

- You can build audiences from people who have already interacted with your business, such as:
- Website visitors

- Instagram engagers
- Facebook engagers
- Video viewers
- Previous leads
- Then show them follow-up ads.
- Example:
- Someone watched your salon video but didn't enquire.
- You can show another relevant creative to that audience.

14. Local Business Funnel

- A simple funnel:
- Local Audience
- ↓
- Attention
- ↓
- Ad
- ↓
- WhatsApp / Lead Form / Website
- ↓
- Enquiry
- ↓
- Follow-up
- ↓
- Appointment
- ↓
- Customer

15. Follow-Up Is Critical

- Generating the lead is not the end.
- Example:

Lead comes at 10:00 AM

- If the business responds at 8:00 PM, the customer may have already contacted another business.
- A strong process is:
- Lead → Quick Response → Qualification → Appointment → Reminder

16. Example: Coaching Institute

Target Area

- Within the institute's realistic service area.

Campaign

- Leads

Creative

- Student + classroom video

Hook

- "Looking for a coaching institute near you?"

Offer

- "Book a free counselling session."

CTA

- Sign Up

17. Example: Real Estate

- For real estate, your campaign might promote:

- New residential project in Lucknow

- Potential flow:

- Ad

↓

- Lead Form

↓

- Project Details

↓

- Site Visit

↓

- Sales Follow-up

- Don't make misleading claims about:

- Guaranteed returns

- Property appreciation

- Availability

- Pricing

- Legal approvals

- Everything should be accurate.

18. Metrics for Local Campaigns

- Don't focus only on CPL.
- Track:
- Reach
- Impressions
- CTR
- CPC
- Leads
- CPL
- WhatsApp conversations
- Calls
- Qualified leads
- Appointments
- Show-up rate
- Customers
- Revenue

19. Most Important Metric

- Suppose:

Campaign A

- 100 leads ₹50 CPL 5 customers

Campaign B

- 50 leads ₹80 CPL 15 customers
- Campaign B has a higher CPL.
- But it generates 3× more customers.

→ Therefore, Campaign B may be much better for the business.

20. Local Ads Optimization

- Use this framework:
- Low CTR

↓

- Improve Creative
 - Good CTR + Few Leads
- ↓
- Improve Offer / Form / Landing Page
 - Cheap Leads + Poor Quality
- ↓
- Improve Targeting / Qualification
 - Good Leads + Few Appointments
- ↓
- Improve Follow-up
 - Good Appointments + Few Customers
- ↓
- Improve Sales Process
 - Practical Assignment
 - Create a Meta Ads campaign for a local salon.

Business

- Premium Salon

Location

- Lucknow

Objective

Target Area

Offer

Creative

Primary Text

Headline

CTA

Lead/WhatsApp Questions

- Key Lesson
- For local businesses:
- Meta Ads don't make the sale alone.
- The complete system is:
- Right Audience + Right Offer + Right Creative + Fast Follow-up = More Customers

- Today we'll learn how to create a professional lead generation system using Meta Ads.
- The goal isn't just to get leads. The goal is to get qualified leads that can become customers.

1. What Is Lead Generation?

- Lead generation means collecting information from potential customers who are interested in your product or service.
- Common lead information:
 - Name
 - Phone number
 - Email
 - Service/product requirement
 - Budget
 - Preferred location
- Example:
 - Meta Ad
 - ↓
 - Lead Form / WhatsApp / Website
 - ↓
 - Lead
 - ↓
 - Follow-up
 - ↓
 - Qualified Lead
 - ↓
 - Customer

2. Choose the Leads Objective

- If your goal is to generate enquiries, use the Leads objective.
- Meta can support different lead-generation conversion locations depending on your account and campaign setup, such as:
 - Instant Forms
 - Website

- Messaging
- Calls
- Choose the one that matches your sales process.
- 3. Instant Forms
- Instant Forms allow people to submit their information directly within Facebook or Instagram.

Advantages:

- ✓ Fast Mobile-friendly Easy to complete No separate website required
- This can be useful for:
 - Coaching
 - Real Estate
 - Insurance
 - Local services
 - Digital marketing services
 - Education

4. Create an Instant Form

- Typical structure:

Form Name

- Digital Marketing Course Lead Form

Intro

- Learn practical Facebook & Instagram Ads from beginner to advanced.

Questions

- Full Name
- Phone Number
- Email
- Then add a relevant qualification question if needed.

5. More Questions ≠ Better Leads

- Beginners often make a form with 10–15 questions.
- This can create unnecessary friction.
- Start with the information you actually need.
- Example:
 - Name
 - Phone

- Email
- Requirement
- Then test additional qualification questions only when necessary.

6. Higher-Intent Approach

- For some businesses, you may want stronger qualification rather than maximum volume.
- Example:

Question:

- What is your monthly advertising budget?
- Options:
- Below ₹5,000
- ₹5,000–₹20,000
- ₹20,000–₹50,000
- ₹50,000+
- This can help the sales team understand the lead.
- Important: Qualification questions should be relevant to the service.

7. Lead Generation Example

- Suppose you're selling your digital marketing service.

Offer:

- Complete Social Media Management

Primary Text:

- Want more customers from Facebook & Instagram?
- Get professional social media management, content creation and Meta Ads support for your business.
- Submit your details to discuss your requirements.

Headline:

- Grow Your Business Online

CTA:

- Get Quote

8. Lead Quality

- There are three different levels:

Lead

- Someone submitted their information.

Qualified Lead

- The person actually matches your target customer.

Customer

- The person purchased your service/product.
- So:
- 100 Leads
- ↓
- 40 Qualified
- ↓
- 15 Serious Prospects
- ↓
- 5 Customers
- This is why CPL alone is not enough.

9. CPL

- $\text{CPL} = \text{Cost Per Lead}$
- Formula:
- $\text{Ad Spend} \div \text{Number of Leads}$
- Example:
- ₹2,000 spent
- 40 leads
- $\text{CPL} =$
- ₹50

10. Cost Per Qualified Lead

- This is even more useful for many businesses.
- Example:
- ₹2,000 spent
- 40 leads

- 10 qualified leads
- Cost per qualified lead:
- $\text{₹}2,000 \div 10 = \text{₹}200$

11. Cost Per Customer

- Example:
- $\text{₹}2,000$ ad spend
- 5 customers
- Cost per customer:
- $\text{₹}2,000 \div 5 = \text{₹}400$
- Now you know what the advertising actually cost to acquire each customer.

12. Lead Form vs Website

Instant Form

- Good when:
- You want quick lead capture
- You don't have a strong website
- Mobile conversion is important

Website

- Good when:
- You have a strong landing page
- You need more information
- You want a detailed conversion journey
- You have reliable tracking
- Neither is automatically better.
- Test based on your business.

13. Lead Form vs WhatsApp

Lead Form

- User submits information.
- Best for:
- Structured lead collection

- Follow-up calls
- CRM processing

WhatsApp

- User starts a conversation.
- Best for:
- Quick enquiries
- Product questions
- Appointment discussions
- Businesses with strong sales teams

14. Follow-Up Strategy

- Generating a lead is only the beginning.
- Example:

Step 1

- Lead submitted.

Step 2

- Send WhatsApp message/call quickly.

Step 3

- Understand requirement.

Step 4

- Give relevant information.

Step 5

- Schedule appointment/demo/call.

Step 6

- Follow up if required.

15. Example Follow-Up

- Customer submits:
- "I want Meta Ads training."
- Don't send a generic:
- "Hi"
- Instead:

- "Hi! Thanks for your enquiry about our Meta Ads training. Could you tell me whether you're learning for your own business, freelancing, or a job?"
- Now the conversation becomes useful.

16. Lead Quality Problems

- Suppose:
- $CPL = ₹30$
- But most people:
- Don't answer calls
- Give fake information
- Aren't interested
- Don't match your target customer
- Don't celebrate the ₹30 CPL.
- Instead, investigate:

Audience

- Are you reaching the right people?

Creative

- Does the ad clearly explain the offer?

Form

- Are you attracting low-intent users?

Offer

- Is the offer creating curiosity without genuine buying intent?

17. Lead Generation Funnel

- Professional lead generation looks like:
- Ad
- ↓
- Click / Form
- ↓
- Lead
- ↓
- Qualification
- ↓
- Contact

↓

- Appointment

↓

- Sales

↓

- Customer
- Track each stage.

18. Example Campaign Analysis

- Campaign:
- Ad Spend = ₹5,000
- Results:
- 100 leads
- 40 qualified
- 20 appointments
- 8 customers

CPL

- $₹5,000 \div 100$
- = ₹50

Cost per Qualified Lead

- $₹5,000 \div 40$
- = ₹125

Cost per Appointment

- $₹5,000 \div 20$
- = ₹250

Cost per Customer

- $₹5,000 \div 8$
- = ₹625
- This gives you a much better understanding of campaign profitability.

19. How to Improve Lead Quality

- Try:

1. Better Creative

- Clearly explain who the offer is for.

2. Better Copy

- Avoid vague promises.

3. Better Targeting

- Test audiences relevant to the actual customer.

4. Qualification

- Ask one or two useful questions.

5. Better Follow-Up

- Contact leads quickly.

6. Better Offer

- Give people a genuine reason to enquire.

20. Lead Generation Mistakes

- ✗ Optimizing only for cheap CPL
- ✗ Asking too many form questions
- ✗ Slow follow-up
- ✗ Unclear offer
- ✗ Misleading advertising
- ✗ No CRM or lead tracking
- ✗ Not tracking qualified leads
- ✗ Not tracking sales

Practical Assignment

- Create a lead campaign for Shubh Marketing.

Objective

- Leads

Offer

- Digital Marketing Services

Conversion Location

Target Audience

Daily Budget

Primary Text

Headline

CTA

Lead Form Questions

- Name
- Phone
- Business Type
- What service do you need?

Golden Rule

- Remember:
- A cheap lead is not necessarily a good lead.
- The real goal is:
- Quality Leads → Qualified Leads → Customers → Revenue

- Retargeting is one of the most important Meta Ads strategies because you are advertising to people who have already interacted with your business.

1. What Is Retargeting?

- Retargeting = showing ads again to people who already know or interacted with your business.
- Example:
- Person sees your ad → visits website → doesn't buy → sees your ad again.
- These people are usually called a warm audience.

2. Cold vs Warm vs Hot Audience

- Cold Audience
- People who haven't interacted with your business.
- Example:
- New potential customers
- Broad audience
- Interest-based audience
- Warm Audience
- People who have interacted with your business.
- Example:
- Instagram engagers
- Facebook engagers
- Video viewers
- Website visitors
- Hot Audience
- People showing strong buying intent.
- Example:
- Product viewers
- Add-to-cart users
- Checkout users
- Lead form users
- COLD

↓

- Ad

↓

- WARM

↓

- Retargeting

↓

- HOT

↓

- Purchase / Lead

3. Website Visitors

- If your website has the appropriate Meta tracking setup, you can create an audience from people who visited your website.
- Example:
- Website Visitors – Last 30 Days
- Then show them another ad.

Example Ad

- Still interested? Explore our latest offer and take the next step today.

4. Instagram Engagers

- You can create audiences from people who have interacted with your Instagram presence, depending on the audience options available in your account.
- Examples:
- People who engaged with posts
- People who interacted with your profile
- People who engaged with your content

Strategy

- First ad:
- Learn about our service.
- Retargeting ad:
- Ready to get started? Contact us today.

5. Facebook Engagers

- You can similarly create audiences from people who interacted with your Facebook Page or content.

- Example:
- Someone watches or engages with your content.
- Later:
- Show them your offer or lead-generation ad.

6. Video Viewers

- Video viewers are useful retargeting audiences.
- Example:
- You create a 30-second video.
- Someone watches a significant portion of it.
- You can potentially retarget eligible viewers with a second ad.

Ad 1

- 3 mistakes businesses make with Meta Ads.

Retargeting Ad

- Want to learn Meta Ads practically? Join our complete course.

7. Lead Form Openers

- Some people may:
- Open your Instant Form
- Start filling it
- But not complete the submission
- Where supported, you can create an audience around these interactions and show them a different message.
- Example:
- Still interested in learning Meta Ads? Get the complete course details.

8. Add-to-Cart Users

- This is a high-intent audience.
- Example:
- Product Ad
- ↓
- Product Page
- ↓
- Add to Cart

✗ No Purchase

- Now you can retarget those users.

Example:

- Your selected product is still waiting for you.
- Don't create fake urgency or misleading offers.

9. Previous Customers

- Previous customers are extremely valuable.
- Instead of showing them the same acquisition ad, you can advertise:
- New products
- Related products
- Upgrades
- Repeat purchases
- New services
- Example:
- Customer bought:
- Meta Ads Course
- You could promote:
- Advanced Performance Marketing Course

10. Custom Audiences

- A Custom Audience is an audience built from people who have already interacted with your business or from eligible first-party data sources.
- Possible sources include:
- Website activity
- Customer lists
- Instagram/Facebook engagement
- Video engagement
- Lead forms
- App activity

11. Retargeting Time Windows

- You can build audiences based on different time periods.
- Examples:

- 7 Days
- 14 Days
- 30 Days
- 60 Days
- 180 Days
- Choose based on your business's buying cycle.

Example

- For a fast-moving product:
 - 7–30 days
- For a high-value product with a longer decision process:
 - 30–180 days

12. Retargeting Funnel

- A professional funnel could look like:
- Website Visitors
- ↓
- Product Viewers
- ↓
- Add to Cart
- ↓
- Checkout
- ↓
- Purchase
- Each stage can receive a different message.

13. Exclusions

- Exclusions prevent unnecessary audience overlap.

Example

- Your prospecting campaign:
 - Target → New potential customers
 - Exclude → Existing customers
- Your retargeting campaign:
 - Include → Website Visitors
 - Exclude → Purchasers
- This creates a cleaner funnel.

14. Retargeting Example: Clothing Store

Cold Audience Ad

- Discover our latest men's T-shirt collection.

↓

Website Visitor Ad

- Still looking for your next everyday T-shirt? Explore the collection.

↓

Add-to-Cart Ad

- Your selected T-shirt is still in your cart.

↓

Purchaser

- Thanks for shopping with us. Explore our latest arrivals.

15. Retargeting Example: Local Clinic

- Someone watches your physiotherapy video.
- Later, show:
- Experiencing knee or back pain? Learn more about our physiotherapy services and book a consultation.
- The message should remain accurate and shouldn't assume a viewer has a specific medical condition.

16. Retargeting Example: Meta Ads Course

Audience

- People who interacted with your Instagram or visited your website.

Exclude

- People who already purchased.

Ad

- You've seen what Meta Ads can do. Now learn how to create, launch and optimize campaigns through practical training.

CTA

- Sign Up

17. Retargeting vs Prospecting

Prospecting

- Goal:
- Find new people.

Retargeting

- Goal:
- Convert people who already know you.
- PROSPECTING

↓

- New Audience

↓

- Interaction

↓

- RETARGETING

↓

- Conversion

18. Important Mistake

- Don't treat every warm audience as having the same intent.
- Someone who watched 10 seconds of a video is different from someone who:
- Added a product to cart.
- Therefore, your messaging should match the user's level of intent.

19. Retargeting Metrics

- Monitor:
- Reach
- Frequency
- CTR
- CPC
- Leads
- CPL
- Purchases
- CPA
- ROAS

Important

- Retargeting audiences are often smaller, so frequency can rise quickly.
- If frequency increases while performance deteriorates, test new creatives.

Practical Assignment

- Create a retargeting campaign for your ₹999 Meta Ads Course.

Audience 1

- Instagram/Facebook Engagers → _____

Audience 2

- Video Viewers → _____

Audience 3

- Website Visitors → _____

Audience 4

- Lead Form Openers → _____

Exclusion

- Purchasers → _____

Retargeting Message

CTA

Golden Rule

- Prospecting gets attention. Retargeting converts interest into action.
- A strong Meta Ads system combines:
- Cold Audience → Engagement → Retargeting → Conversion → Customer

- In this lesson, you'll learn how to use your existing customer data and engaged audiences to find more relevant people and scale your Meta Ads campaigns.

1. What Is a Custom Audience?

- A Custom Audience is an audience created from people who have already interacted with your business or from eligible first-party data.
- Examples:
 - Website visitors
 - Instagram engagers
 - Facebook engagers
 - Video viewers
 - Customer lists
 - Lead-form users
 - App users

Simple Example

- People who interacted with your business
- ↓
- Custom Audience
- ↓
- Retargeting Ad

2. Custom Audience vs Lookalike Audience

- This difference is very important.

Custom Audience

- Targets existing people.
- Example:
 - People who visited your website.

Lookalike Audience

- Finds new people who are similar to an existing source audience, where the feature is available and eligible.

- Example:
- People who are similar to your existing customers.
- CUSTOM AUDIENCE
- Existing People

↓

- LOOKALIKE
- Similar New People

3. Creating a Website Custom Audience

- If your website has the appropriate Meta tracking setup, you can create an audience from website visitors.
- Example:
- Website Visitors – 30 Days
- You can then use this audience for retargeting.

Example

- Someone visits your website but doesn't contact you.
- Later:
- "Ready to grow your business? Contact Shubh Marketing today."

4. Instagram Custom Audience

- You can create an audience from eligible people who interacted with your Instagram presence.
- Examples:
- People who engaged with your content
- People who interacted with your profile
- Video viewers
- This can be useful for retargeting.

5. Facebook Custom Audience

- Similarly, you can create audiences from eligible Facebook interactions.
- Example:
- Facebook Page Engagers – 30 Days
- Then run a campaign specifically for these people.

6. Video Viewer Audience

- Suppose you publish a video:
- "5 Meta Ads Mistakes Beginners Make"
- People who watch the video can become a useful warm audience.
- You can then show them:
- "Want to learn Meta Ads practically? Join our complete training."

7. Customer List Custom Audience

- If you have a customer list that you're permitted to use for advertising, you may be able to upload it to Meta and create a Custom Audience.
- Example:
- Customer List
- ↓
- Custom Audience
- ↓
- Retarget Existing Customers
- You can use this for:
- New products
- Upsells
- Cross-sells
- Repeat purchases
- Make sure the data was collected and is used in accordance with applicable privacy requirements and Meta's policies.

8. What Is a Lookalike Audience?

- A Lookalike Audience helps you find new potential customers who resemble a source audience.
- For example:
- You have a list of genuine customers.
- Meta can use that source audience to help identify similar people.

9. Source Audience

- The original audience you use to create a Lookalike is called the source audience.
- Examples:
- Customers

- Qualified leads
- Website purchasers
- High-value customers

Important:

- A good source audience generally gives you better signals than a random audience.

10. Best Source Audience

- Suppose you have:

Audience A

- 1,000 website visitors

Audience B

- 300 actual customers

Audience C

- 500 qualified leads
- If your goal is to find new customers, an audience based on actual customers or qualified high-quality users can provide stronger signals than simply using everyone who visited your website.

11. Lookalike Percentage

- Lookalike audiences have historically been described using percentages such as:
 - 1%
 - 2%
 - 3%
 - 5%
- The exact availability and setup can vary by country/account.

General concept:

- Smaller percentage → closer to the source
- Larger percentage → broader audience

12. 1% Lookalike

- A smaller lookalike generally focuses more closely on people similar to your source audience.
- Useful when:
 - You want a relatively focused audience.

13. 2–5% Lookalike

- A broader lookalike can give you more potential people to reach.
- Useful when:
- You need more scale and have enough conversion data to support expansion.

14. Example: E-commerce

- Suppose your store has:
- 5,000 customers
- Create:
- Customer Custom Audience
- Then, where available:
- Lookalike Audience
- Use it for prospecting.
- 5,000 Customers

↓

- Source Audience

↓

- Lookalike

↓

- New Potential Customers

↓

- Sales

15. Lookalike for Lead Generation

- Suppose your business has:
- 1,000 qualified leads
- You can use those qualified leads as a source audience where eligible.
- Then create a lookalike audience to find new potential prospects.
- This can be more useful than using a list containing random or low-quality leads.

16. Lookalike vs Interest Targeting

Interest Targeting

- You tell Meta:
- Find people interested in these topics.

Lookalike

- You tell Meta:
- Find people similar to this source audience.

Example

- For a digital marketing agency:
- Interest Audience:
- Digital Marketing
- Entrepreneurship
- Small Business
- Lookalike:
- Existing qualified customers
- Test both and compare actual business results.

17. Broad vs Lookalike

- Don't assume Lookalike will always outperform broad targeting.
- Meta's delivery system can sometimes perform well with broad audiences.
- A professional advertiser tests:
- Broad
- Lookalike
- Relevant interest audiences
- Then compares:
- CPL
- CPA
- Qualified leads
- Purchases
- ROAS

18. Audience Exclusions

- When creating prospecting campaigns, you may want to exclude existing customers or recent converters.
- Example:

Prospecting

- Include:
- Lookalike Audience
- Exclude:

- Existing Customers
- This reduces unnecessary overlap.

19. Complete Funnel

- A professional account can use:
- CUSTOMERS
- ↓
- Custom Audience
- ↓
- Lookalike / Prospecting
- ↓
- NEW PEOPLE
- ↓
- Website / Instagram
- ↓
- Retargeting
- ↓
- Lead / Purchase

20. Example: Shubh Marketing

- Suppose you have:
- 500 genuine clients/leads
- You can create an eligible source audience from that data.
- Then test:

Campaign A

- Broad

Campaign B

- Lookalike

Campaign C

- Relevant interest audience
- Compare the results.

21. Important Mistakes

Mistake 1

- Using poor-quality leads as your source audience.

Mistake 2

- Assuming 1% Lookalike is automatically the best.

Mistake 3

- Never testing broad targeting.

Mistake 4

- Not excluding existing customers when appropriate.

Mistake 5

- Using customer data without proper permission or compliance.

Practical Assignment

- Create a hypothetical Lookalike strategy for your Meta Ads Course.

Source Audience

- Previous course customers

Source Size

Lookalike

Location

Exclusion

- Existing purchasers

Campaign Objective

Creative

CTA

Golden Rule

- Custom Audience = people you already know.
- Lookalike Audience = new people similar to your source audience.

- And remember:
- Good Source Data → Better Audience Signals → Better Testing Opportunities

Lesson 28 Preview

Meta Ads Scaling Strategies

- Next we'll learn how to scale a winning campaign without destroying performance:
- When to increase budget
- Vertical scaling
- Horizontal scaling
- Creative scaling
- Audience expansion
- Budget testing
- Scaling mistakes
- Maintaining CPL/CPA
- When to pause an ad
- When to duplicate an ad

- Today you'll learn how to scale a successful Meta Ads campaign and increase leads or sales without unnecessarily damaging performance.
- Scaling means increasing your results while maintaining acceptable costs and quality.

1. What Is Scaling?

- Suppose your campaign is currently:
- Budget: ₹500/day
- Leads: 10/day
- CPL: ₹50
- You want more leads.
- Instead of creating a completely new campaign immediately, you can test ways to increase delivery.

Goal:

- ₹500/day
- ↓
- ₹1,000/day
- ↓
- More Leads
- ↓
- Maintain acceptable CPL

2. Before Scaling, Check Performance

- Don't scale a campaign just because it generated a few cheap leads.
- First check:
 - ✓ Consistent results Good lead quality Acceptable CPL/CPA Stable conversion rate Enough data to make a decision Tracking is working correctly

3. Vertical Scaling

- Vertical scaling = increasing the budget of an existing campaign/ad set.
- Example:
 - ₹500/day

↓

- ₹600/day

↓

- ₹750/day

↓

- ₹1,000/day
- Increase gradually and monitor performance.
- Avoid making huge changes without a reason.

4. Example of Vertical Scaling

- Suppose:
- Current Budget: ₹500/day
- CPL: ₹60
- You could test:
- ₹600/day
- Then monitor:
- CPL
- Leads
- CPM
- CTR
- Lead quality
- If performance remains acceptable, you can consider another increase.

5. Why Big Budget Changes Can Be Risky

- A major budget change can significantly alter delivery.
- For example:
- ₹500/day → ₹5,000/day
- This is a 10× increase.
- The campaign may suddenly enter more expensive auctions or reach different parts of the audience.

Beginner Rule:

- Scale gradually and measure the effect.

6. Horizontal Scaling

- Horizontal scaling = expanding through additional audiences, creatives, placements, or campaign structures.
- Example:
- You have one winning audience.
- Instead of only increasing its budget, you can test:
- Winning Campaign

↓

- 
- Broad Lookalike New Creative
- This gives you additional opportunities for growth.

7. Creative Scaling

- Sometimes the audience is good, but your creative becomes tired.
- Instead of completely changing the campaign, create additional creative variations.
- Example:

Creative 1

- Product demonstration

Creative 2

- Customer testimonial

Creative 3

- Problem → Solution

Creative 4

- UGC-style video

Creative 5

- Offer-focused creative

8. Creative Testing

- Suppose Ad A is performing well.
- Don't stop there.
- Create:

- Ad B
- Ad C
- Ad D
- Then compare:
- CTR
- CPC
- CPL/CPA
- Conversion rate
- Lead quality
- Purchases

9. Audience Scaling

- If your current audience is working, test additional audiences.
- For example:

Audience A

- Broad

Audience B

- Lookalike

Audience C

- Relevant interest audience

Audience D

- Another relevant geographic segment
- Don't assume one audience will always be the winner.

10. Geographic Scaling

- For a local business, geographic expansion can be useful only if the business can actually serve the new areas.
- Example:
- Current:
- Kharar
- Potential expansion:
- Mohali → Chandigarh → nearby serviceable areas
- But don't expand beyond the actual service area just to increase reach.

11. Placement Scaling

- If your campaign is currently using limited placements, you can test broader eligible placements.
- For example:
 - Facebook Feed
 - Instagram Feed
 - Stories
 - Reels
- Advantage+ Placements can also allow Meta to distribute across eligible placements based on predicted performance.

12. Budget Scaling vs Creative Scaling

Budget Scaling

- You're increasing:
 - Money

Creative Scaling

- You're increasing:
 - Creative options

Audience Scaling

- You're increasing:
 - Reachable potential customers
- A strong scaling strategy can use all three.

13. When NOT to Scale

- Don't scale when:
 - CPL is already increasing sharply
 - CPA is too high
 - Lead quality is poor
 - Sales are declining
 - Tracking is broken
 - Creative fatigue is obvious
 - Campaign hasn't generated enough useful data
- First fix the underlying problem.

14. Scaling Example

- Current campaign:
- ₹1,000/day
- Results:
- 20 leads/day
- $\text{CPL} = ₹50$
- Good lead quality
- You want 40 leads/day.
- Possible approach:

Step 1

- Test a gradual budget increase.

Step 2

- Add new creatives.

Step 3

- Test another relevant audience.

Step 4

- Monitor CPL and lead quality.

Step 5

- Continue only if the economics remain acceptable.

15. What Happens After Scaling?

- Don't only look at the number of leads.
- Compare:
 - Metric
 - Before
 - After
- Budget
 - ₹ 1,000
 - ₹ 1,500
- Leads
 - 20
 - 27

- CPL
 - ₹ 50
 - ₹ 56
- Qualified Leads
 - 8
 - 12
- Customers
 - 3
 - 5
- The budget increased by 50%.
- Leads increased by 35%.
- But qualified leads and customers also increased.
- This may still be a successful scaling move depending on your profit margins.

16. Scale Based on Business Results

- This is extremely important.
- Suppose:

Campaign A

- $CPL = ₹40$
- Customers = 2

Campaign B

- $CPL = ₹70$
- Customers = 10
- Campaign B has a higher CPL but may be much more valuable.
- Therefore:
- Scale profitable customer acquisition, not just cheap leads.

17. Scaling E-commerce

- For an e-commerce campaign, monitor:
- Purchases
- CPA
- Revenue
- ROAS
- Conversion rate
- Average order value

- Profit margin
- Example:
- Ad Spend = ₹10,000
- Revenue = ₹40,000
- ROAS = 4×
- Before scaling, make sure the 4× ROAS is actually profitable after product and operating costs.

18. Scaling Local Lead Generation

- For a local business, monitor:
- Leads → Qualified Leads → Appointments → Customers
- Example:
- 100 Leads
- ↓
- 40 Qualified
- ↓
- 20 Appointments
- ↓
- 8 Customers
- If you double the budget but lead quality collapses, that's not successful scaling.

19. Scaling Checklist

- Before increasing budget, ask:

Campaign

- Is it generating consistent results?

Creative

- Do I have multiple strong creatives?

Audience

- Is the audience large enough?

Tracking

- Are conversions being recorded correctly?

Economics

- Is CPL/CPA profitable or acceptable?

Sales

- Are leads actually becoming customers?
- If the answers are positive, scaling becomes much safer.

20. Common Scaling Mistakes

- ✗ Increasing budget too aggressively
- ✗ Scaling a campaign with poor lead quality
- ✗ Changing budget, audience and creative at the same time
- ✗ Copying a winning campaign without understanding why it worked
- ✗ Looking only at CPL
- ✗ Ignoring frequency and creative fatigue
- ✗ Scaling without checking profitability

Practical Assignment

- Imagine you have a winning campaign:
- Budget: ₹500/day Leads: 10/day CPL: ₹50 Qualified Leads: 4/day
- You want to increase results.
- Create a scaling plan:

Vertical Scaling

- New Budget = ₹_____

Creative Scaling

- New Creative 1 = _____ New Creative 2 = _____

Audience Scaling

- Audience 1 = _____ Audience 2 = _____

Metrics to Monitor

Golden Rule

- Don't scale just because you can spend more. Scale when the business can profitably handle more customers.
- Remember:
- Winning Campaign → Controlled Budget Increase → New Creatives → New Audiences → Monitor → Optimize → Scale

- In this lesson, you'll learn how to test different ads, audiences, offers and messages so you can identify what actually produces better results.
- Testing = Change one important variable, compare the results, and make a data-based decision.

1. What Is A/B Testing?

- A/B testing means comparing two versions to see which performs better.
- Example:

Ad A

- Video Creative

Ad B

- Image Creative
- Keep the other important conditions as similar as practical, then compare the results.
- Ad A → Results
- ↓
- Compare
- ↑
- Ad B → Results

2. Why Testing Is Important

- Never assume:
- "This creative will definitely work."
- Instead:
- Test → Measure → Learn → Improve
- Your audience may respond differently than you expect.

3. What Can You Test?

- You can test:

Creative

- Image
- Video
- Reel
- UGC-style content

Hook

- Question
- Problem
- Benefit
- Offer

Copy

- Short text
- Long text

Headline

- Different headline messages.

Audience

- Broad
- Lookalike
- Relevant interests

Offer

- Different legitimate offers or packages.

Landing Page

- Different page designs or messaging.

4. Test One Major Variable

- This is one of the most important rules.
- Suppose you want to test creatives.

Ad A

- Same audience Same offer Same copy Creative A

Ad B

- Same audience Same offer Same copy Creative B
- Now you have a clearer comparison.

- If you change everything at once, it becomes difficult to know what caused the difference.

5. Example: Creative Test

- You sell men's T-shirts.

Creative A

- Product image.

Creative B

- Short product video.
- Same:
- Audience
- Budget/testing conditions
- Offer
- Landing page
- Then compare:
- CTR
- CPC
- Add to Cart
- Purchases
- CPA
- ROAS

6. Hook Testing

- A hook is the first message that gets attention.

Hook A

- "Looking for a comfortable everyday T-shirt?"

Hook B

- "Upgrade your everyday style."

Hook C

- "3 T-shirts every man should own."
- Test different hooks and see which generates stronger downstream results.

7. Offer Testing

- Suppose your product costs ₹999.
- You could test legitimate offers such as:

Offer A

- ₹999

Offer B

- ₹899

Offer C

- Bundle offer
- But don't judge only by clicks.
- The best offer is the one that improves profitable conversions, not simply CTR.

8. Audience Testing

- Example:

Ad Set A

- Broad audience

Ad Set B

- Relevant interest audience

Ad Set C

- Lookalike audience
- Compare:
- CPM
- CTR
- CPC
- CPL/CPA
- Conversion rate
- Lead quality
- Purchases

9. A/B Testing Metrics

- For lead generation, track:
- CTR

- CPC
- Leads
- CPL
- Qualified leads
- Cost per qualified lead
- Customers
- For e-commerce, track:
- CTR
- CPC
- Add to Cart
- Checkout
- Purchases
- CPA
- ROAS

10. CTR Is Not Everything

- Suppose:

Ad A

- CTR = 2.5% CPL = ₹100

Ad B

- CTR = 1.8% CPL = ₹60
- Ad A gets more clicks.
- But Ad B generates leads more cheaply.
- And if Ad B's leads are higher quality, Ad B may be the better business ad.

11. Don't Judge Too Quickly

- A common beginner mistake:
- "This ad didn't generate results in 2 hours, so I'll turn it off."
- That's often too early.
- Allow enough time and data for a meaningful comparison, while considering:
- Budget
- Conversion volume
- Audience size
- Sales cycle
- Campaign objective

- There is no universal number of hours that guarantees a valid test.

12. Testing Budget

- Suppose you have:
- ₹1,000/day
- You could structure a controlled test so different variations receive enough opportunity to generate useful data.
- The exact budget depends on:
- Your target CPA/CPL
- Audience size
- Conversion rate
- Number of variants
- Sales volume
- Don't split a small budget across too many ads.

13. Don't Test 20 Ads at Once

- Suppose your total budget is only:
- ₹500/day
- And you create:
- 20 different ads.
- Each ad may receive too little delivery to generate useful data.
- Instead, start with a manageable number of strong variations.

14. Creative Testing Framework

- Use:

Test 1 — Hook

- Same creative, different opening.

Test 2 — Creative

- Same message, different format.

Test 3 — Copy

- Different primary text.

Test 4 — Offer

- Different legitimate offers.

Test 5 — Audience

- Different audience strategy.
- This creates a systematic testing process.

15. Example: Meta Ads Course

- You're selling a Meta Ads course.

Creative A

- Student testimonial

Creative B

- Instructor talking to camera

Creative C

- Course syllabus graphic

Creative D

- Screen recording of Meta Ads Manager
- Then compare the results.

16. Finding a Winner

- Suppose:
 - Spend
 - leads
 - CPL
 - ₹ 1,000
 - 0
 - ₹ 100
 - ₹ 1,000
 - 6
 - ₹ 62.50
 - ₹ 1,000
 - 7
 - ₹ 142.
 - 86
- Ad B has the lowest CPL.
- But don't stop there.

- Check:
- Which ad generated the best-quality leads and customers?

17. Winner → Scale

- Once you identify a strong performer:

Step 1

- Keep the winning creative.

Step 2

- Test another variation.

Step 3

- Monitor performance.

Step 4

- Gradually scale if economics remain healthy.
- Don't assume one winning ad will remain a winner forever.

18. Creative Fatigue

- An ad can perform well initially and then decline.
- Signs can include:
 - Increasing frequency
 - Falling CTR
 - Increasing CPC
 - Increasing CPL/CPA
 - Declining conversion rate
- When this happens:

→ *Test new creative angles.*

19. Test Different Creative Angles

- For one product, create different approaches.

Angle 1 — Problem

- "Struggling to find a comfortable everyday T-shirt?"

Angle 2 — Benefit

- "Comfortable fit for everyday wear."

Angle 3 — Social Proof

- "See why customers are choosing this collection."

Angle 4 — Product Demo

- Show the fabric, fit and details.

20. Testing Mistakes

- ✗ Changing multiple variables simultaneously
- ✗ Turning ads off too quickly
- ✗ Testing too many ads with a tiny budget
- ✗ Looking only at CTR
- ✗ Ignoring lead quality
- ✗ Ignoring purchases/revenue
- ✗ Making decisions from very small data
- ✗ Never testing new creative

Practical Assignment

- You're advertising a ₹999 Meta Ads Course.
- Create 3 creative tests:

Creative A

- Video: _____

Creative B

- Image: _____

Creative C

- Testimonial: _____

Hook A

Hook B

Hook C

Main KPI

Secondary KPI

Golden Rule

- Don't guess which ad is better. Test it.
- The professional process is:
- Create → Test → Measure → Analyze → Improve → Scale

Lesson 30 Preview

Meta Ads Analytics & Reporting

- Next you'll learn how to read Meta Ads Manager like a professional:
- CPM
- CTR
- CPC
- CPL
- CPA
- ROAS
- Frequency
- Conversion rate
- Breakdown reports
- Campaign analysis
- Ad-level analysis
- Finding winning and losing ads
- Client reporting

- In this lesson, you'll learn how to read Meta Ads Manager data, identify problems, find winning ads, and prepare professional reports.
 - Goal: Don't just run ads—understand why they are performing well or poorly.

Why Analytics Is Important

- Running a campaign without checking data is like driving without looking at the dashboard.
- You need to know:
 - How many people saw your ad?
 - How many clicked?
 - How much did each click cost?
 - How many leads/sales came?
 - How much did each result cost?
 - Is the campaign profitable?

The Meta Ads Structure

- Remember the 3 levels:
- Campaign ↓ Ad Set ↓ Ad

Campaign

- Controls the overall campaign objective.
- Example:
 - Leads

Ad Set

- Controls things such as:
 - Audience
 - Budget/budget strategy depending on setup
 - Placements
 - Optimization settings

Ad

- Controls the actual creative:
 - Image/video

- Primary text
- Headline
- CTA

CPM

CPM = Cost Per 1,000 Impressions

- It tells you how much you're paying to show your ads 1,000 times.

Formula:

- $\text{CPM} = \text{Ad Spend} \div \text{Impressions} \times 1,000$
- Example:
- Spend = ₹1,000
- Impressions = 50,000
- CPM:
- $\text{₹}1,000 \div 50,000 \times 1,000 = \text{₹}20$
- CTR

CTR = Click-Through Rate

- It tells you what percentage of impressions resulted in clicks.
- Example:
- 10,000 impressions
- 200 clicks
- $\text{CTR} = 2\%$
- A low CTR can indicate that your:
- Hook
- Creative
- Offer
- Message
- needs improvement.

CPC

CPC = Cost Per Click

- Formula:
- $\text{Ad Spend} \div \text{Link Clicks}$
- Example:
- Spend = ₹1,000

- Clicks = 200
- CPC = ₹5
- Lower CPC can be useful, but cheap clicks don't automatically mean good business results.

CPL

CPL = Cost Per Lead

- Formula:
- $\text{Ad Spend} \div \text{Leads}$
- Example:
- Spend = ₹2,000
- Leads = 40
- CPL = ₹50
- But always check lead quality.

CPA

CPA = Cost Per Acquisition/Action

- The exact interpretation depends on the conversion you're measuring.
- For example:
- Spend = ₹5,000
- Purchases = 10
- CPA = ₹500 per purchase
- ROAS

ROAS = Return on Ad Spend

- Formula:
- $\text{Revenue} \div \text{Ad Spend}$
- Example:
- Revenue = ₹40,000
- Ad Spend = ₹10,000
- ROAS = 4×
- Meaning:
- ₹4 revenue for every ₹1 of ad spend.
- Remember:
 - ROAS is not the same as profit.
- You must also consider product costs, shipping, salaries, taxes, returns and other business expenses.

Frequency

- Frequency tells you approximately how many times, on average, people in the reached audience saw your ad.
- Example:
- Reach = 10,000
- Impressions = 20,000
- Frequency ≈ 2
- If frequency keeps rising and performance declines, you may be experiencing creative fatigue.

Conversion Rate

- Conversion rate tells you how many people completed the desired action compared with the relevant number of visitors/clicks.
- Example:
- 1,000 landing-page visitors
- 50 purchases
- Conversion Rate = 5%

Important Metrics by Campaign Type

Lead Generation

- Focus on:
- CTR
- CPC
- Leads
- CPL
- Qualified Leads
- Cost per Qualified Lead
- Customers

E-commerce

- Focus on:
- CTR
- CPC
- Add to Cart
- Checkout
- Purchases
- CPA

- Revenue
- ROAS

Local Business

- Focus on:
- Leads
- Calls
- WhatsApp conversations
- CPL
- Qualified leads
- Appointments
- Customers

How to Read a Campaign

- Suppose your campaign has:
- Metric Result
- Spend ₹5,000
- Impressions 100,000
- CTR 2%
- Clicks 2,000
- CPC ₹2.50
- Leads 100
- CPL ₹50
- Customers 10
- Cost/Customer
 - ₹500
- Now don't stop at:
 - "CPL is ₹50."
- The more important question is:
- How many customers did those 100 leads produce?
- Finding the Problem
- Use this simple diagnosis:

High CPM

- Possible issues:
- Audience competition
- Placement

- Market demand
- Creative relevance

Low CTR

- Check:
- Creative
- Hook
- Offer
- Copy

Good CTR + High CPC

- Check:
- CPM
- Auction conditions
- Delivery

Good clicks + Few leads

- Check:
- Landing page
- Form
- Offer
- Website experience

Cheap leads + Poor quality

- Check:
- Targeting
- Creative messaging
- Qualification
- Offer

Good leads + Few sales

- Check:
- Sales team
- Follow-up
- Pricing
- Product/service
- Closing process

Campaign → Ad Set → Ad Analysis

- Always drill down.

Level 1 — Campaign

- Ask:
 - Is the campaign achieving the business goal?

Level 2 — Ad Set

- Ask:
 - Which audience/targeting setup is working?

Level 3 — Ad

- Ask:
 - Which creative and message is producing the best results?

Example

- Suppose:

Ad Set A

- $\text{CPL} = ₹80$

Ad Set B

- $\text{CPL} = ₹45$
- You might think:
- B is the winner.
- But then you discover:

Ad Set A

- 20 qualified leads

Ad Set B

- 5 qualified leads
- Now A may actually be more valuable.
 - Always analyze quality, not just volume.

Breakdown Reports

- Meta Ads Manager allows you to break down results into different dimensions where available.
- Examples can include:

- Age
- Gender
- Placement
- Geography
- Platform
- Device
- This can help you identify patterns.
- Example:
- You discover that:
- Instagram Reels
- are generating most of your qualified leads.
- That insight can guide your creative and placement strategy.

Ad-Level Analysis

- Suppose you have 4 ads:
- Ad CTR CPL
- Ad A
 - 8% ₹150
- Ad B
 - 9% ₹70
- Ad C
 - 4% ₹55
- Ad D
 - 2% ₹100
- Ad C looks strongest on these metrics.
- But again, check:
- Which ad produces the best-quality leads or customers?
- Don't Optimize Every Hour
- Another common mistake is constantly changing campaigns.
- Example:
- 9 AM → Turn ad off 10 AM → Change audience 11 AM → Increase budget 12 PM → Change creative
- This makes it difficult to understand what actually caused the performance change.
- Instead:
- Make a clear change → allow enough data → analyze → decide.

Client Reporting

- If you're managing ads for clients, prepare a simple report.

Example:

Meta Ads Report

- Period: 1–14 August
- Spend: ₹10,000
- Reach: 50,000
- Impressions: 80,000
- Leads: 200
- CPL: ₹50
- Qualified Leads: 75
- Customers: 20
- Cost per Customer: ₹500
- Then add:

Key Insights

- Video Creative B generated the strongest CTR and lower CPL.

Next Action

- Test 3 new video variations and continue monitoring qualified lead volume.

Professional Reporting Formula

- Don't send the client only:
 - "We got 200 leads."
- Instead show:
- Ad Spend ↓ Leads ↓ Qualified Leads ↓ Appointments ↓ Customers ↓ Revenue
- This demonstrates the business impact of advertising.
- Weekly Optimization Checklist
- Every week, review:

Campaign

- Spend
- Results
- Cost per result

Creative

- CTR
- CPC
- Frequency
- Creative fatigue

Audience

- Performance by audience
- Quality of leads
- Geographic performance

Sales

- Qualified leads
- Appointments
- Customers
- Revenue

Tracking

- Pixel/dataset events
- Conversion tracking
- CRM/lead records

The Complete Meta Ads Analysis Framework

- Use this sequence:
- Delivery
- How much did Meta spend?
- ↓
- Attention
- Did people engage/click?
- ↓
- Conversion
- Did they become leads/customers?
- ↓
- Quality
- Were they good leads/customers?
- ↓
- Economics
- Was the acquisition profitable?

- Practical Assignment
- Analyze this campaign:
- Ad Spend: ₹10,000 Impressions: 200,000 Clicks: 4,000 Leads: 200 Qualified Leads: 80 Customers: 20 Revenue: ₹60,000
- Calculate:

CPM

- ₹ _____

CTR

- _____ %

CPC

- ₹ _____

CPL

- ₹ _____

Cost per Qualified Lead

- ₹ _____

Cost per Customer

- ₹ _____

ROAS

- _____ ×
- Golden Rule
 - The best Meta Ads manager doesn't just look at metrics—they connect the metrics to business results.
- Remember the full journey:
- Impression → Click → Lead/Purchase → Qualified Customer → Revenue → Profit

- Today we'll learn how to identify why a Meta Ads campaign is not performing and what action to take.
 - Golden Rule: Don't change everything at once. First identify the problem, then make one clear optimization.

Campaign Optimization Framework

- Use this simple process:
- Data → Find Problem → Identify Cause → Make Change → Monitor → Scale
- Example:
- High CPL ↓ Check CTR ↓ Check CPC ↓ Check Landing Page/Form ↓ Find Problem ↓ Optimize

Problem: High CPM

CPM = Cost per 1,000 impressions

- Suppose your CPM suddenly becomes very high.

Possible reasons:

- Competitive audience
- Small audience
- Poor creative relevance
- Expensive market
- Limited placements
- Seasonal demand

What to test:

- ✓ New creatives Broader relevant audience Additional eligible placements Different audience strategy
- Problem: Low CTR
- Example:
- CTR = 0.5%
- People are seeing your ad but not clicking.

Check your:

- Hook

- Creative
- Offer
- Primary text
- Headline
- CTA

Solution:

- Create a stronger first 1–3 seconds in video creatives.
- Instead of:
 - "Welcome to our company."
- Try:
 - "Getting leads but no customers?"
- The hook should be relevant to the audience and truthful.

Problem: High CPC

- If CPC is high, first understand why.
- A common chain is:
- High CPM + Low CTR → High CPC
- So don't immediately focus only on CPC.

Test:

- Better creative
- Better hook
- More relevant audience
- Different creative format

Problem: Good CTR but Few Leads

- This is an important situation.
- Suppose:
- CTR = 2.5%
- but:
- CPL = ₹200
- People are clicking, but not converting.

Check:

- Landing page
- Lead form

- Offer
- Website speed
- Mobile experience
- Trust signals
- Call-to-action

★

Problem: Cheap Leads but Poor Quality

- Suppose:
- $CPL = ₹30$
- You get 100 leads.
- But only 5 are genuine prospects.
- That's not necessarily a successful campaign.

Possible reasons:

- Audience is too broad for the offer
- Ad messaging attracts the wrong people
- Offer creates low-intent enquiries
- Form has insufficient qualification

Solutions:

- ✓ Improve messaging Add relevant qualification questions Test a different audience Improve the offer

Problem: Good Leads but No Sales

- Suppose you receive:
- 50 qualified leads
- but only:
- 1 customer
- The problem may not be the Meta campaign.
- Check:
- Response time
- Sales calls
- Follow-up
- Pricing
- Product/service
- Sales process

Remember:

- Marketing generates opportunities. Sales converts opportunities into customers.

Problem: Ad Not Spending

- Sometimes an ad or campaign doesn't spend as expected.
- Possible reasons include:
 - Audience too restrictive
 - Budget/bid constraints
 - Limited delivery opportunities
 - Account or ad issues
 - Review/restriction
 - Schedule or setup limitations

What to check:

- Campaign → Ad Set → Ad
- Look for delivery status and any warnings/errors in Ads Manager.

Problem: Learning/Delivery Instability

- Campaign performance can fluctuate while Meta's system gathers and uses conversion signals.
- Don't panic because of short-term fluctuations.

Avoid:

- ✗ Constantly editing the campaign Changing targeting every few hours Repeatedly changing budget Frequently replacing creatives without analysis
- Make deliberate changes and give the campaign enough opportunity to provide useful data.
- Problem: Creative Fatigue
- Signs:
 - Frequency increasing
 - CTR declining
 - CPC increasing
 - CPL/CPA increasing
 - Conversion rate declining

Solution:

- Create fresh variations.
- Example:

- Old:
- Product Image
- New:
- Product video
- UGC-style video
- Testimonial
- Product demonstration
- Problem → Solution creative

Problem: Frequency Too High

- If the same small audience keeps seeing your ad, frequency can increase.
- This is especially common with retargeting.

Solutions:

- Refresh creatives
- Expand relevant audience where appropriate
- Adjust retargeting windows
- Review exclusions
- Don't use a single universal frequency number as a "failure" threshold; judge it together with performance and campaign type.

Problem: High CPL

- Use this diagnostic:
- High CPL ↓ Check CTR ↓ Low CTR? ↓ Improve Creative Good CTR? ↓ Check Conversion Rate ↓ Low Conversion Rate? ↓ Improve Form / Landing Page / Offer

Problem: High CPA

- If your cost per customer is high, look at the entire funnel:
- Ad → Click → Lead → Qualified Lead → Sale
- Find where the biggest drop occurs.
- Example:
- 100 Leads ↓ 80 Qualified ↓ 60 Sales Calls ↓ 5 Customers
- The problem may be the sales process, not the advertisement.
- Tracking Problems
- Sometimes the campaign is performing but reporting is wrong.
- Check:

- Meta Pixel/dataset
- Events
- Purchase/Lead event
- Website integration
- Event parameters
- CRM records
- UTM tracking where relevant
- Compare Meta-reported conversions with your actual business records.

Don't Optimize Based on One Metric

- Never say:
 - "CTR is high, therefore the campaign is successful."
- Look at the complete picture:
- Metric Question
- CPM How expensive is delivery?
- CTR Are people interested enough to click?
- CPC How much does a click cost?
- CPL How much does a lead cost?
- CPA How much does a customer/action cost?
- ROAS How much revenue came from ad spend?
- Lead Quality Are the leads valuable?
- Profit Is the campaign actually profitable?

Optimization Decision Tree

Step 1 — Delivery

- Is the campaign spending?
- No → Check delivery/setup.
- Yes → Continue.

Step 2 — CTR

- Is the creative getting engagement?
- No → Test creative/hook.

Step 3 — Conversion

- Are clicks becoming leads/sales?
- No → Check offer, form, website and conversion experience.

Step 4 — Quality

- Are the leads genuine?
- No → Improve targeting, messaging and qualification.

Step 5 — Sales

- Are leads becoming customers?
- No → Improve follow-up and sales process.

Step 6 — Profit

- Is customer acquisition profitable?
- No → Review pricing, margins, offer and campaign economics.

When Should You Pause an Ad?

- Consider pausing an ad when:
- It has received enough spend/data relative to your target economics
- It consistently underperforms against your other relevant ads
- Lead/customer quality is poor
- Creative fatigue is evident
- It is clearly hurting campaign efficiency
- Don't pause an ad simply because it had a bad few hours.

When Should You Duplicate?

- Don't duplicate every winning ad automatically.
- First ask:
 - Why do I need a duplicate?
- Duplication can be useful for specific testing or structural reasons, but unnecessary duplication can fragment delivery and make analysis harder.

Optimization Example

- Suppose:
- Spend: ₹5,000 Leads: 50 CPL: ₹100
- You investigate:

CTR

- Good

CPC

- Good

Lead quality

- Poor

Finding:

- The ad is attracting people who aren't the target customer.

Action:

- Change:
- Creative messaging + qualification
- rather than simply trying to reduce CPC.
- Professional Optimization Rule
- Before making a change, write:

Problem

- CPL is increasing.

Evidence

- CTR has fallen and frequency has increased.

Hypothesis

- Creative fatigue may be reducing engagement.

Action

- Test 3 new creative angles.

Measurement

- Compare:
- CTR + CPL + Lead Quality
- This is much better than randomly changing settings.
- Practical Assignment
- Your campaign has:
- CPM = ₹300
- CTR = 0.6%
- CPC = ₹50
- CPL = ₹250
- Lead quality = Poor

Question 1

- What is the first problem you would investigate?
- Answer: _____

Question 2

- What would you change first?
- Answer: _____

Question 3

- Which metrics would you monitor after the change?
- Answer: _____
- Golden Rule
 - Don't optimize the metric. Optimize the business outcome.
- Remember:
- High CPM → Investigate Delivery
- Low CTR → Improve Creative
- High CPC → Check CPM + CTR
- High CPL → Check Conversion Funnel
- Poor Lead Quality → Improve Audience + Messaging + Qualification
- High CPA → Analyze the Complete Sales Funnel
- Low Profit → Fix the Economics
